

Design A: fine exposure averaged over each support. The people of each buffer are fixed across supports; the 20 km sample contains the 3 km sample.
Point labels (G): support units with sampled adults. Notes: each buffer's sample (education-reporting adults, fine units). The change between buffers is split into exposure and sample parts in resolution_review_buffer_design_a_decomposition.csv. Avg: concentration units; IT1/IT2: hours at or above the threshold in 2023.
