

Fixed education-reporting adults and individual quintiles. Exposure aggregated with all-adult weights; locality branch shown separately.

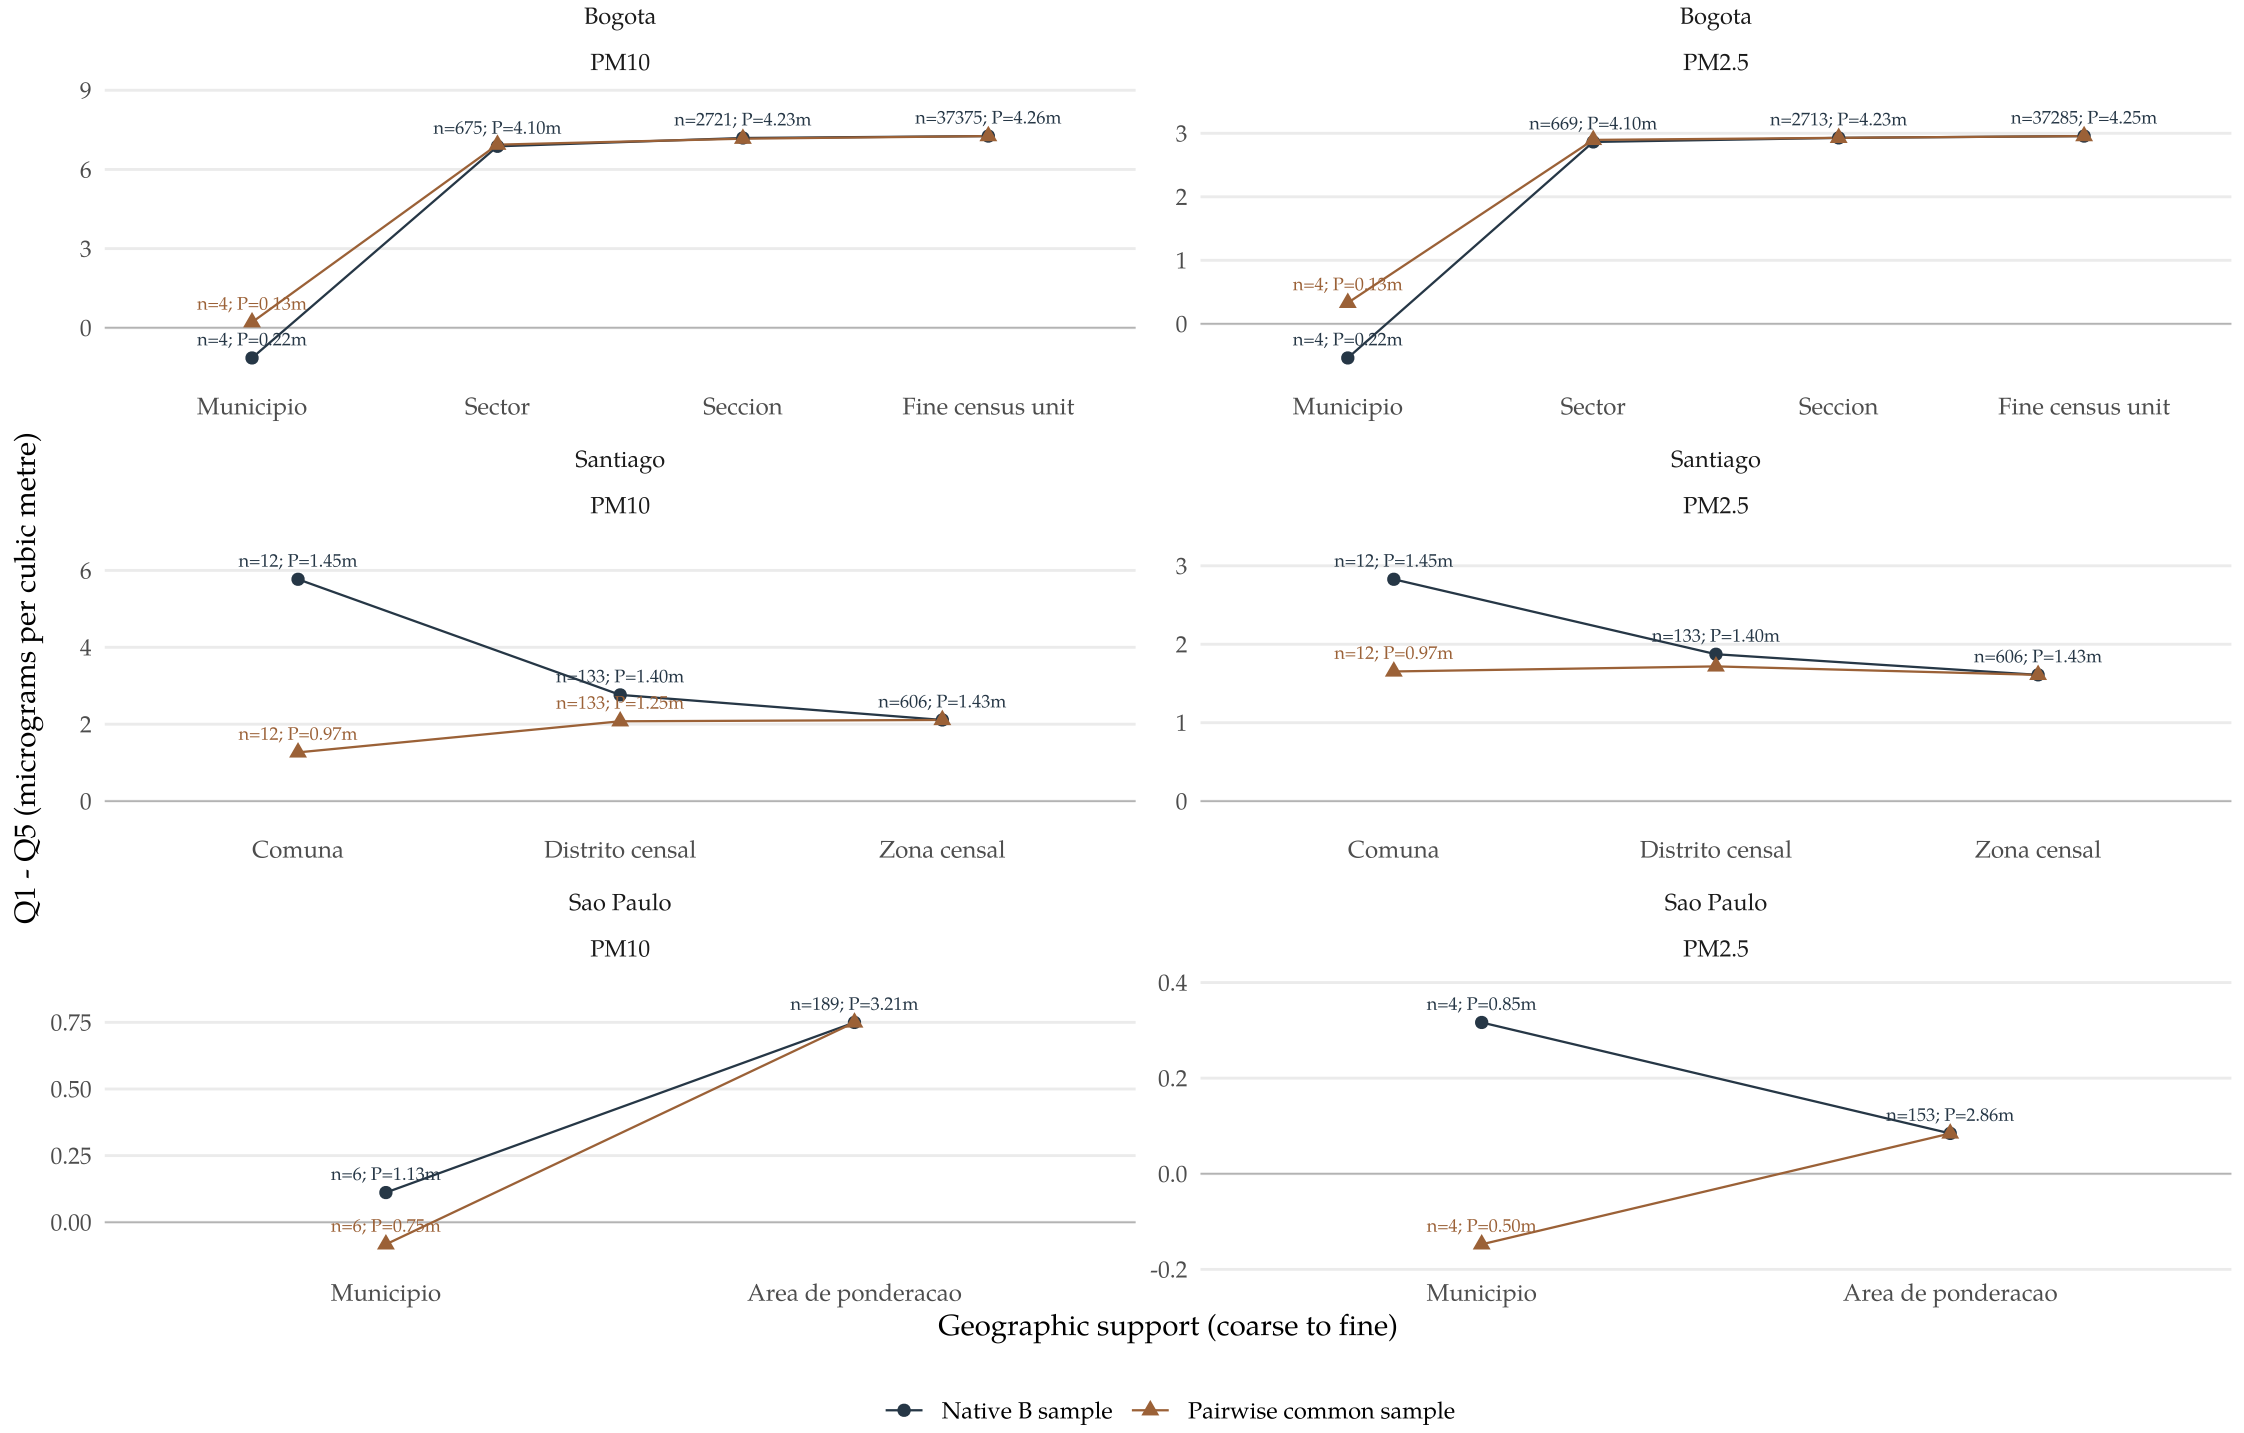

Fixed education-reporting adults and individual quintiles. Exposure aggregated with all-adult weights; locality branch shown separately.

Design A - annual hours at or above IT2

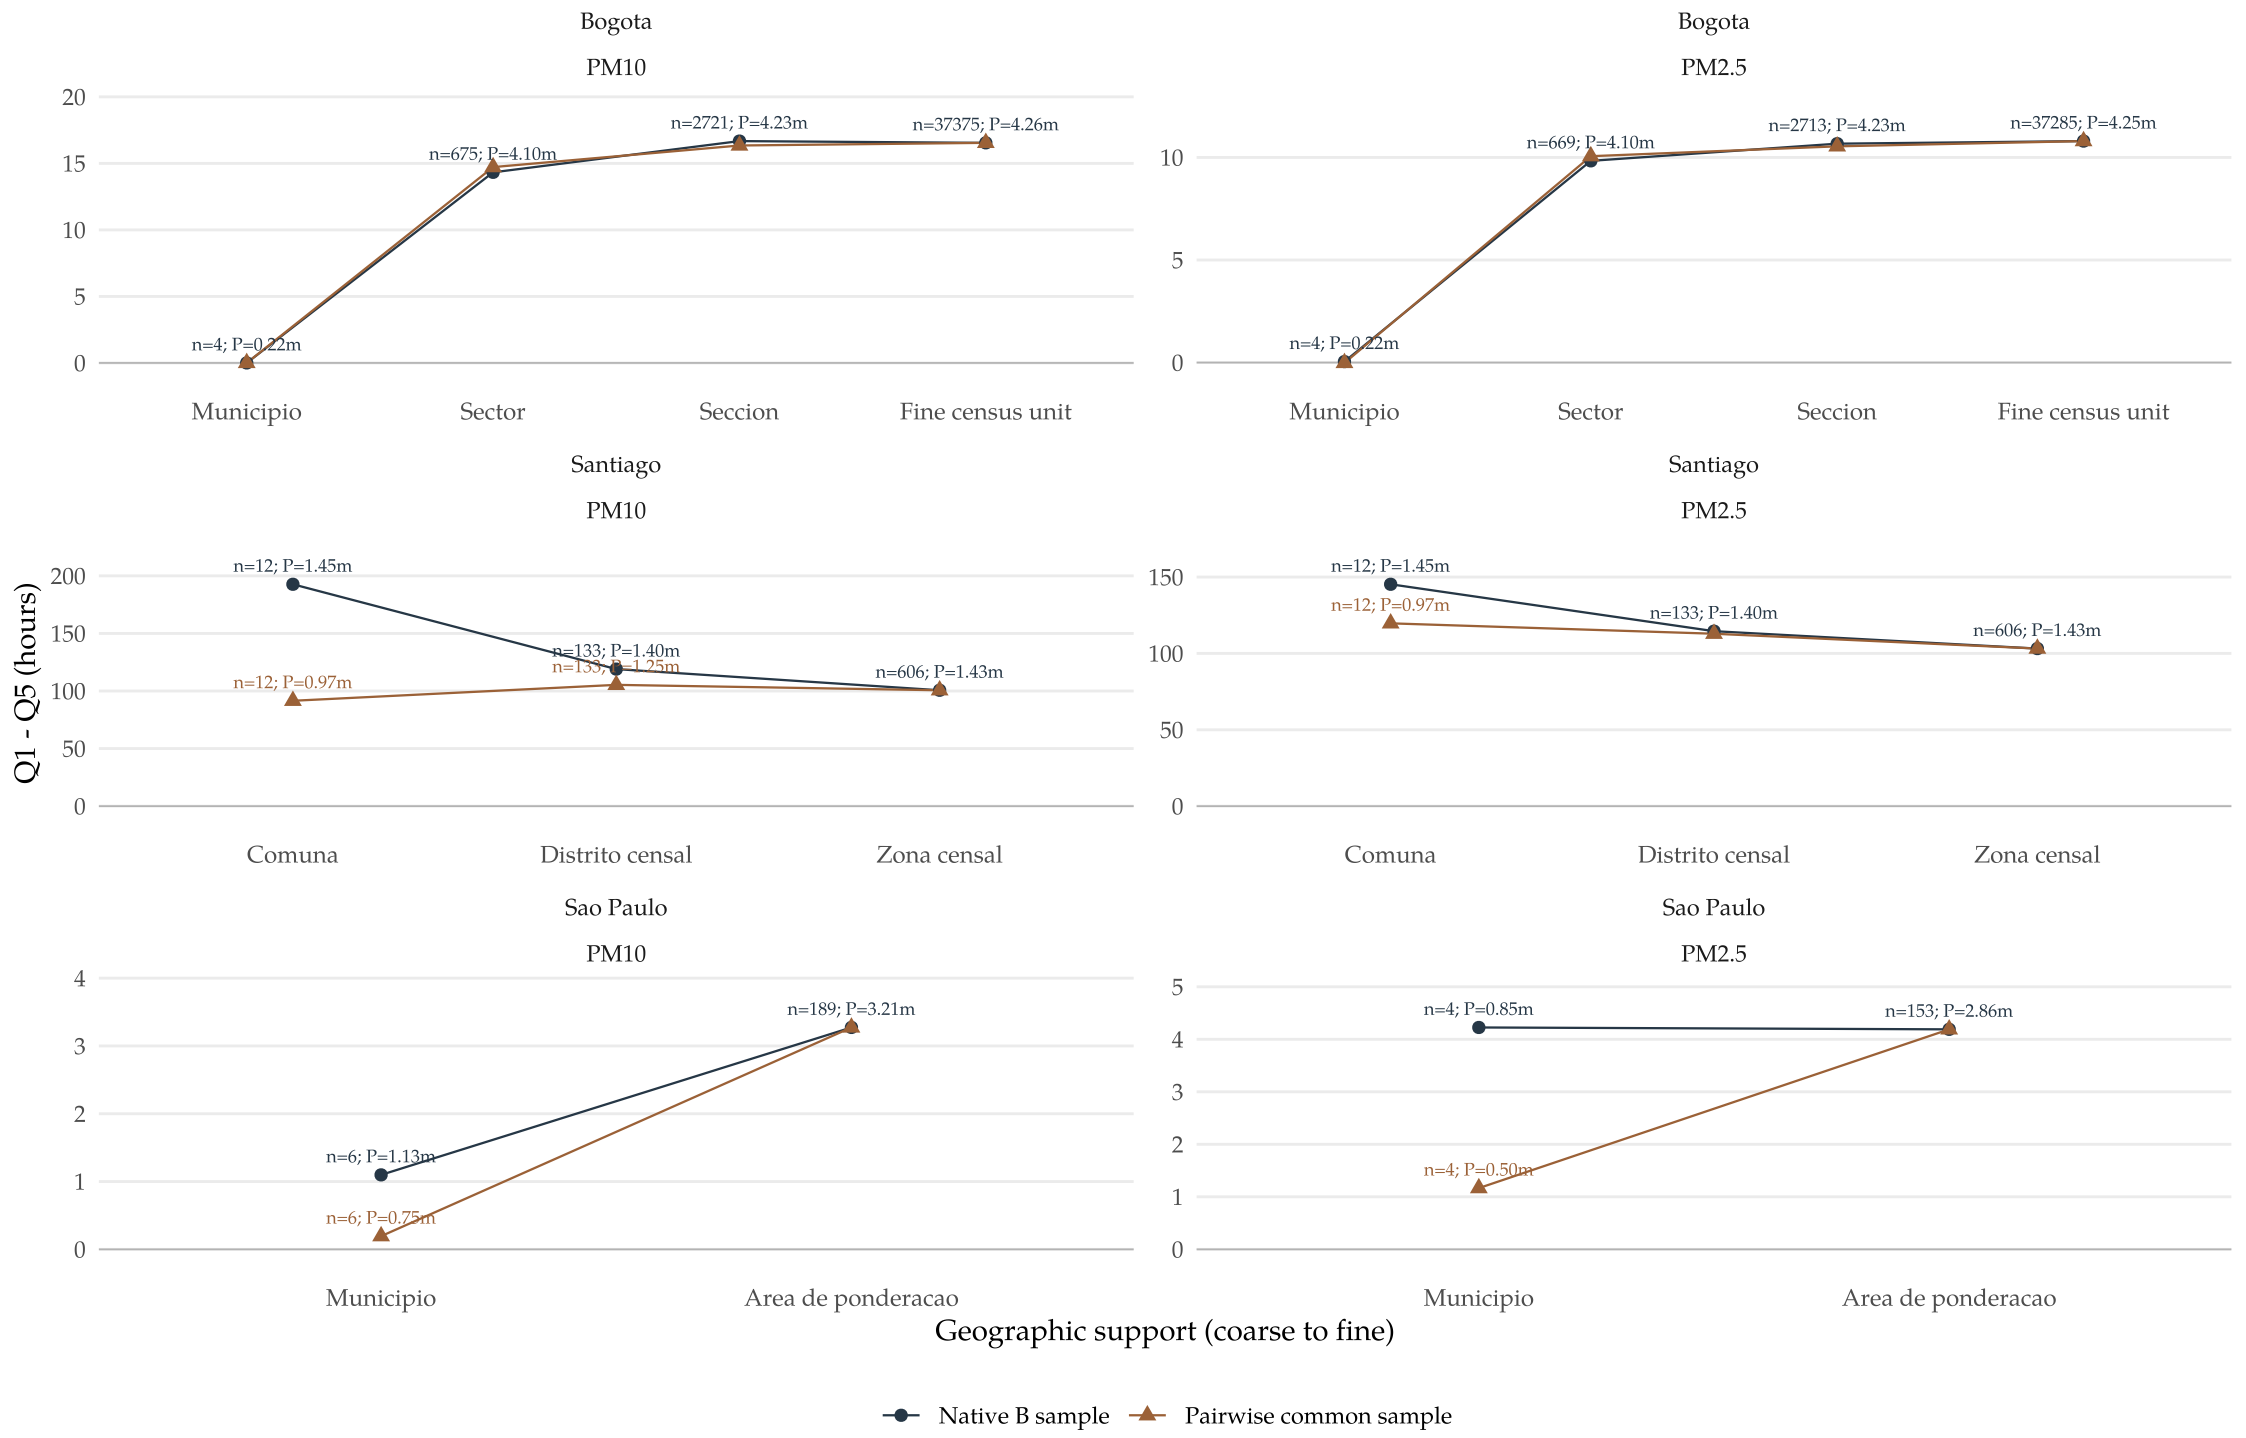

Fixed education-reporting adults and individual quintiles. Exposure aggregated with all-adult weights; locality branch shown separately.

Design B - annual mean exposure

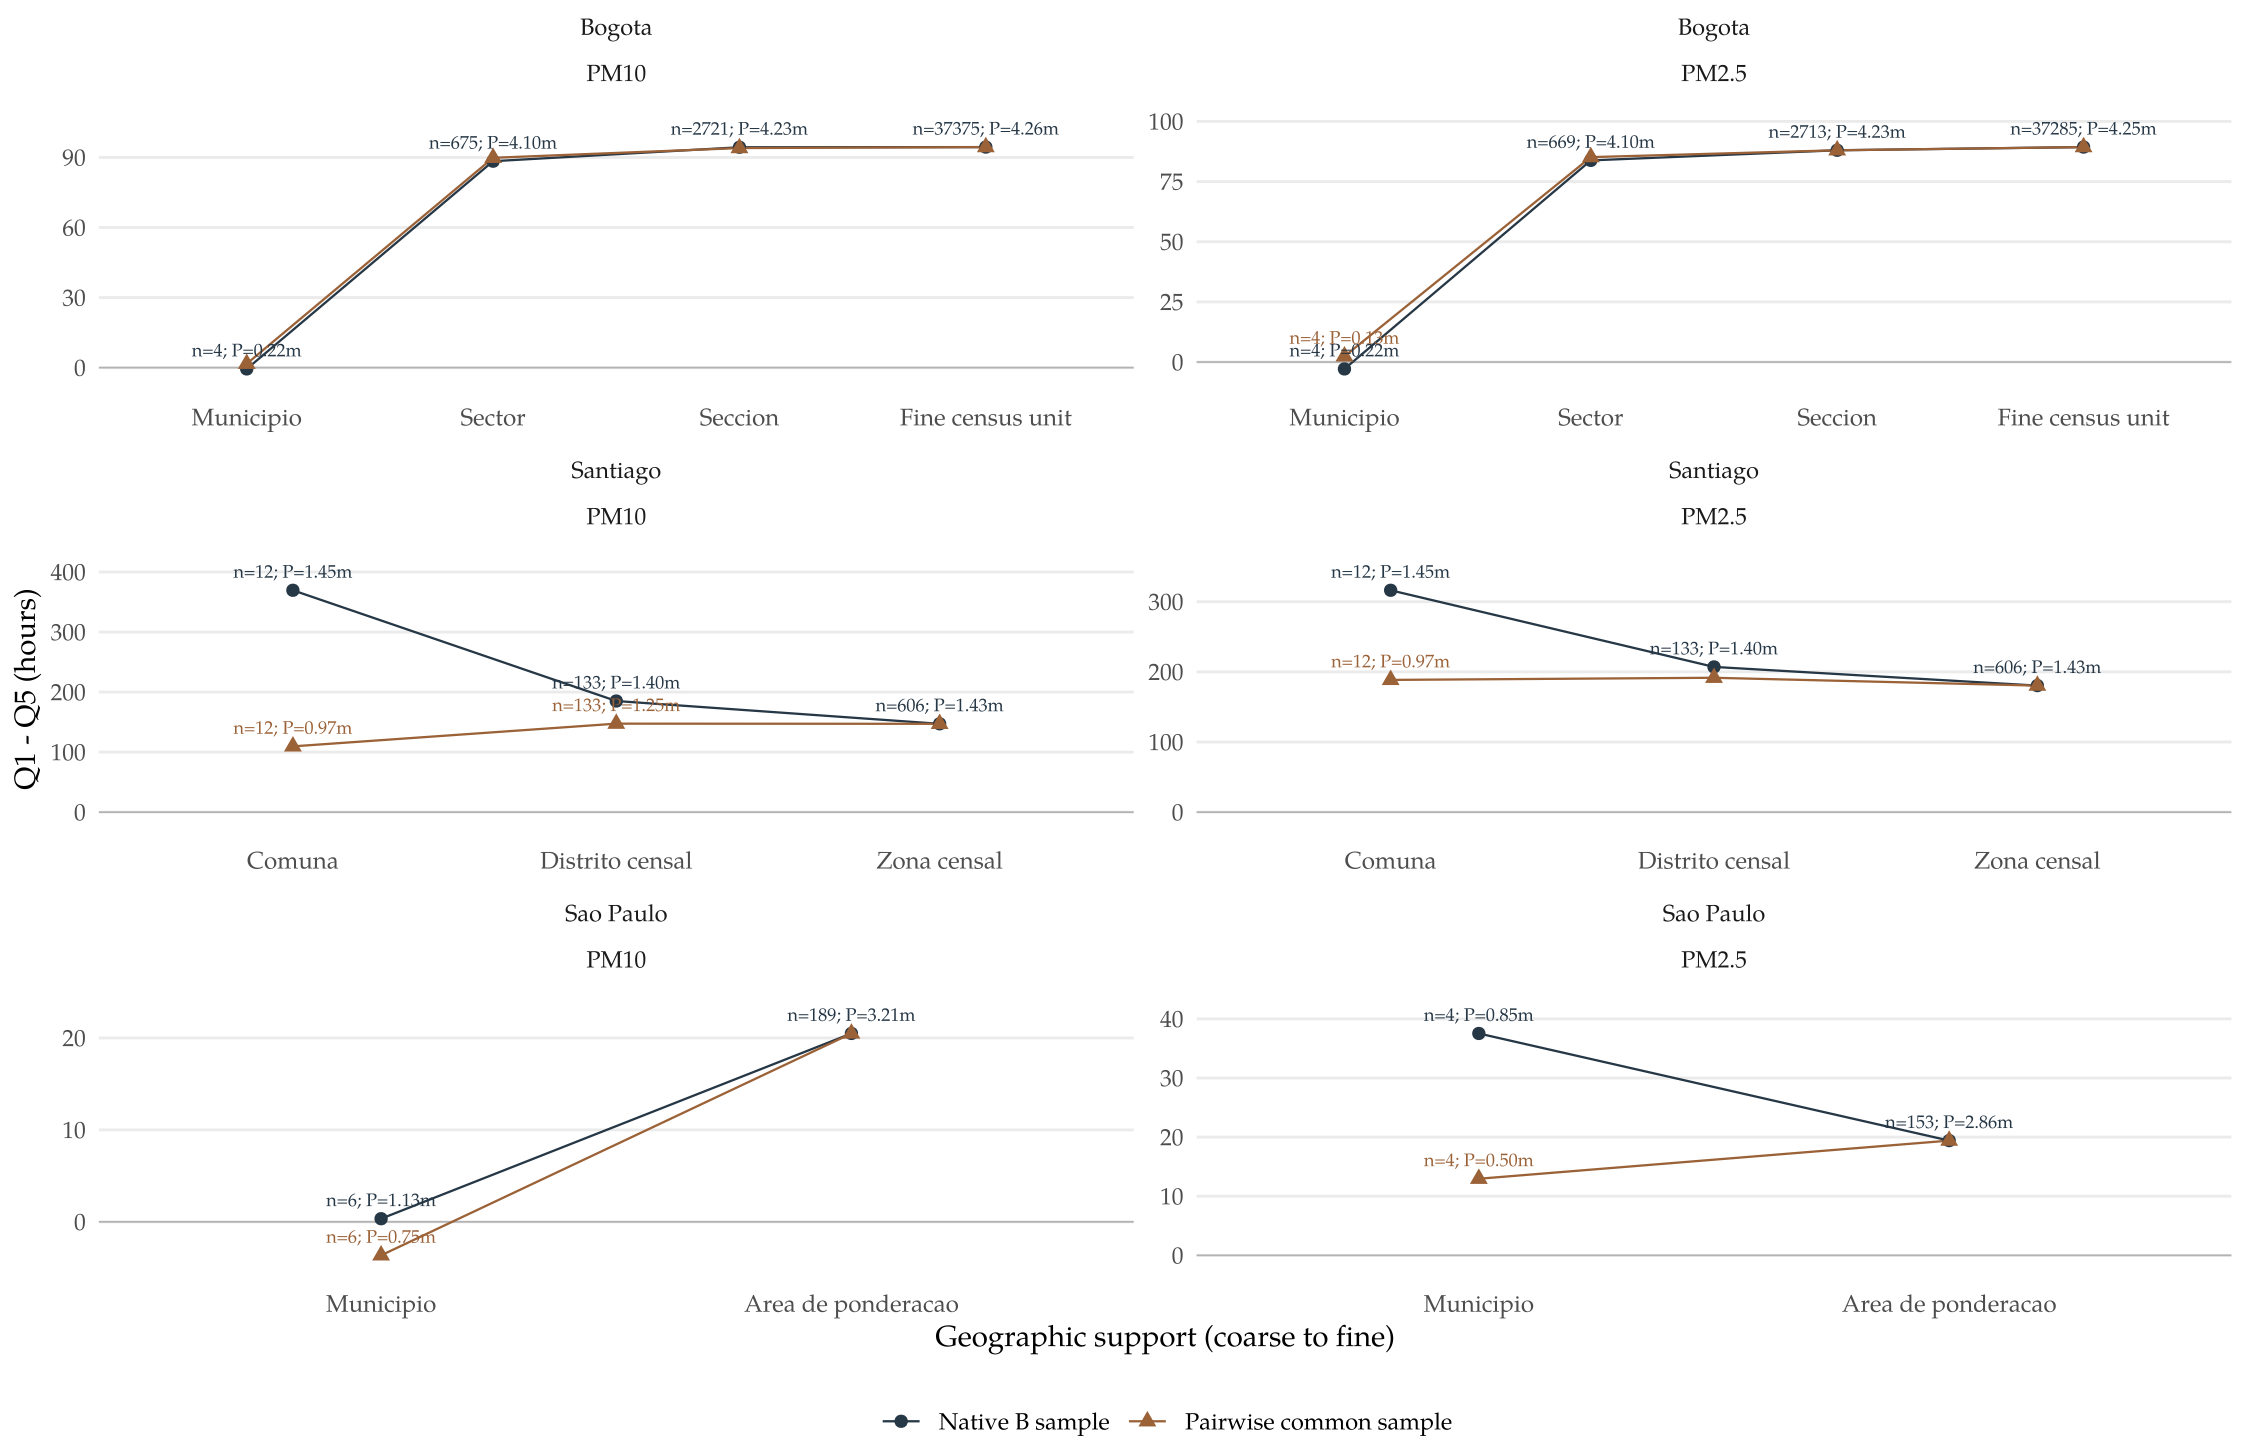

Native and common samples vary by level; P = education-reporting adults.
Common samples are pairwise intersections. Paired changes are shown separately.

Design B - annual hours at or above IT1

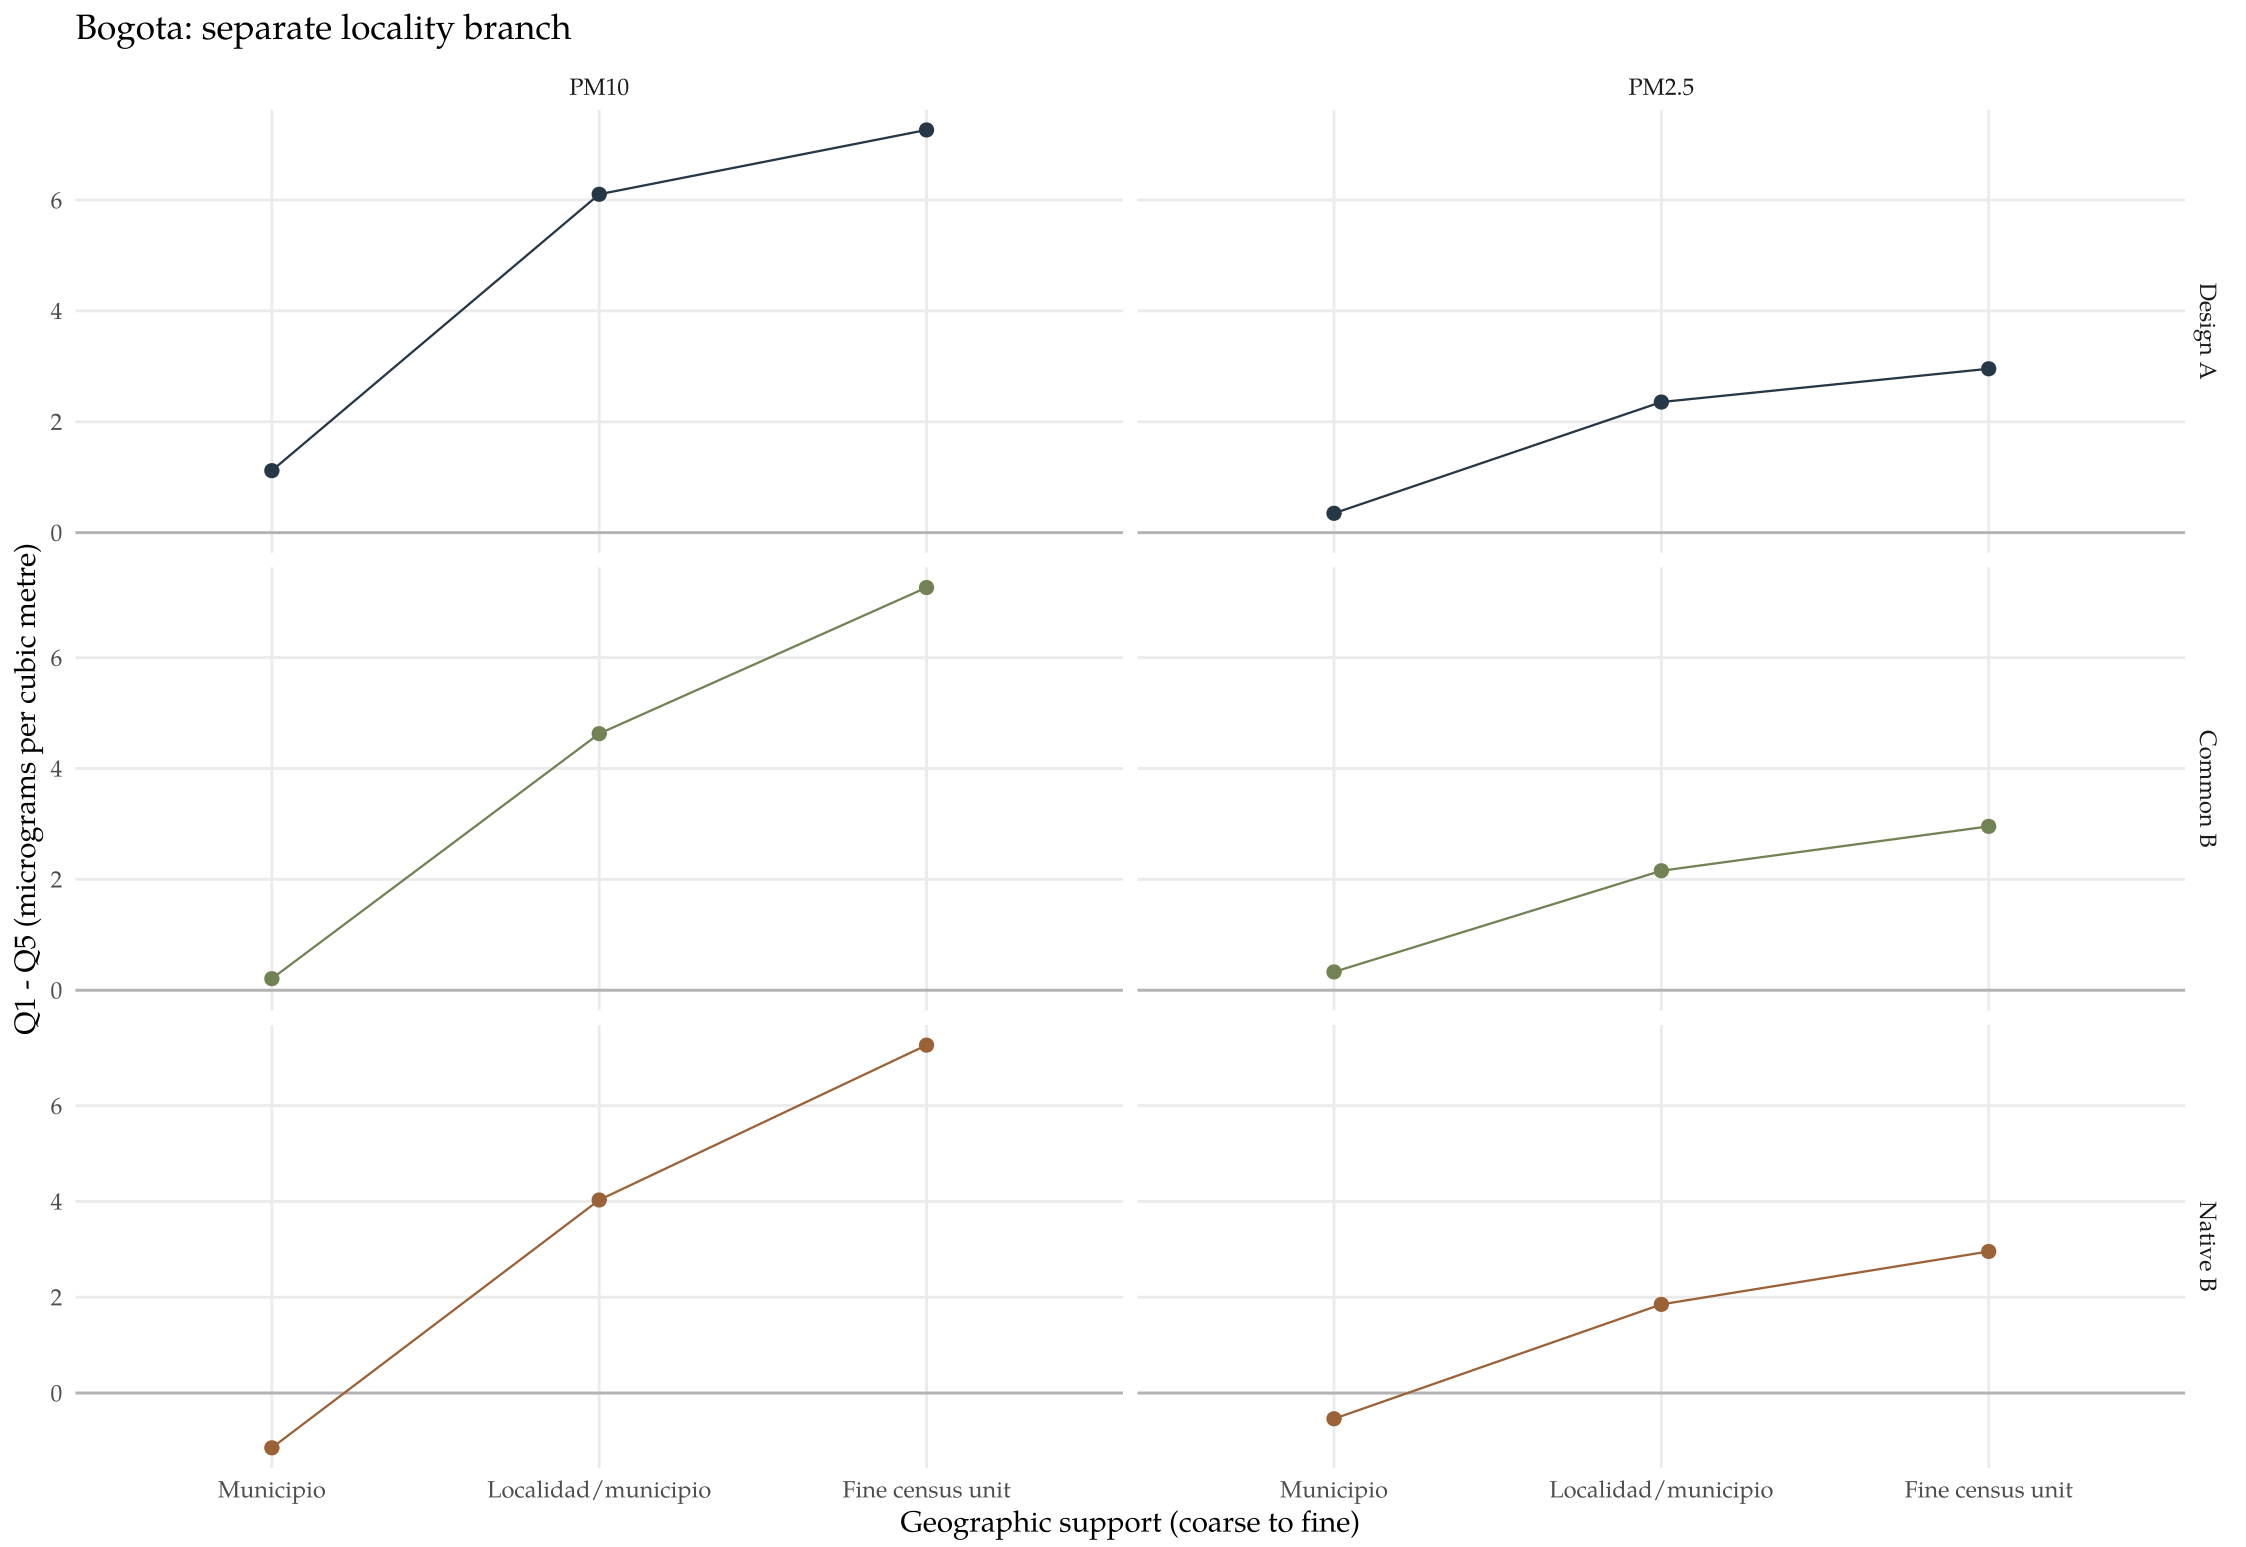

Native and common samples vary by level; P = education-reporting adults.
Common samples are pairwise intersections. Paired changes are shown separately.

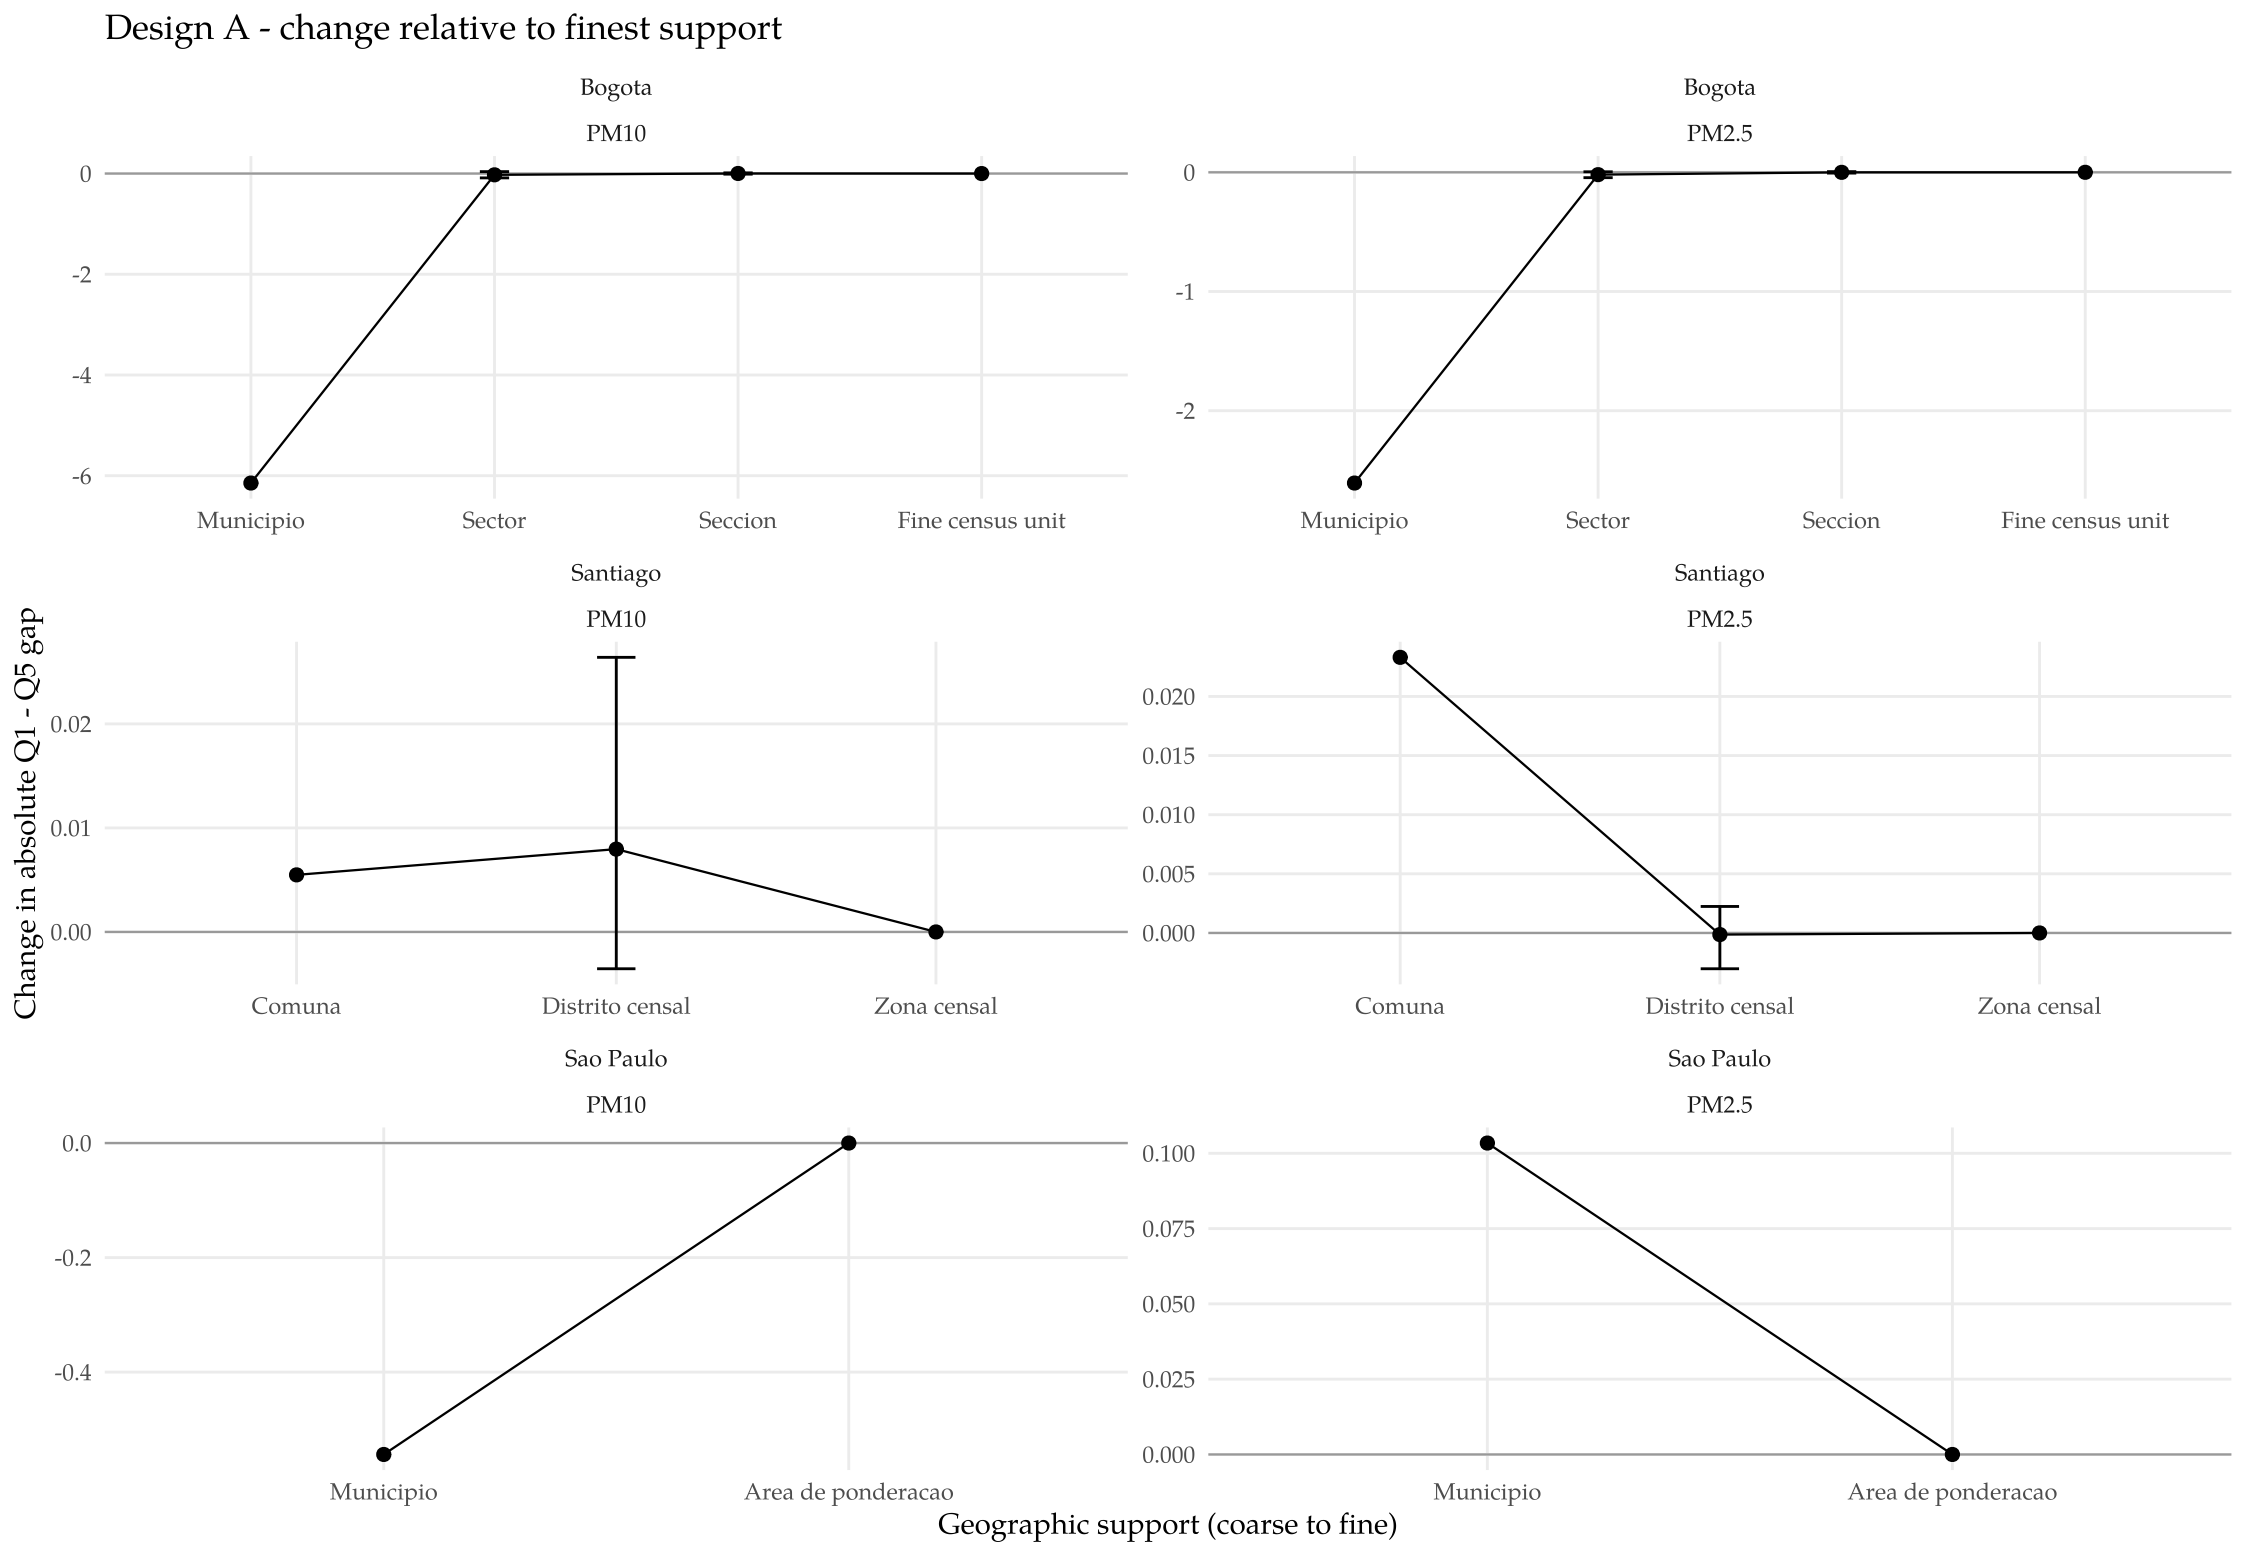

Design B - annual hours at or above IT2

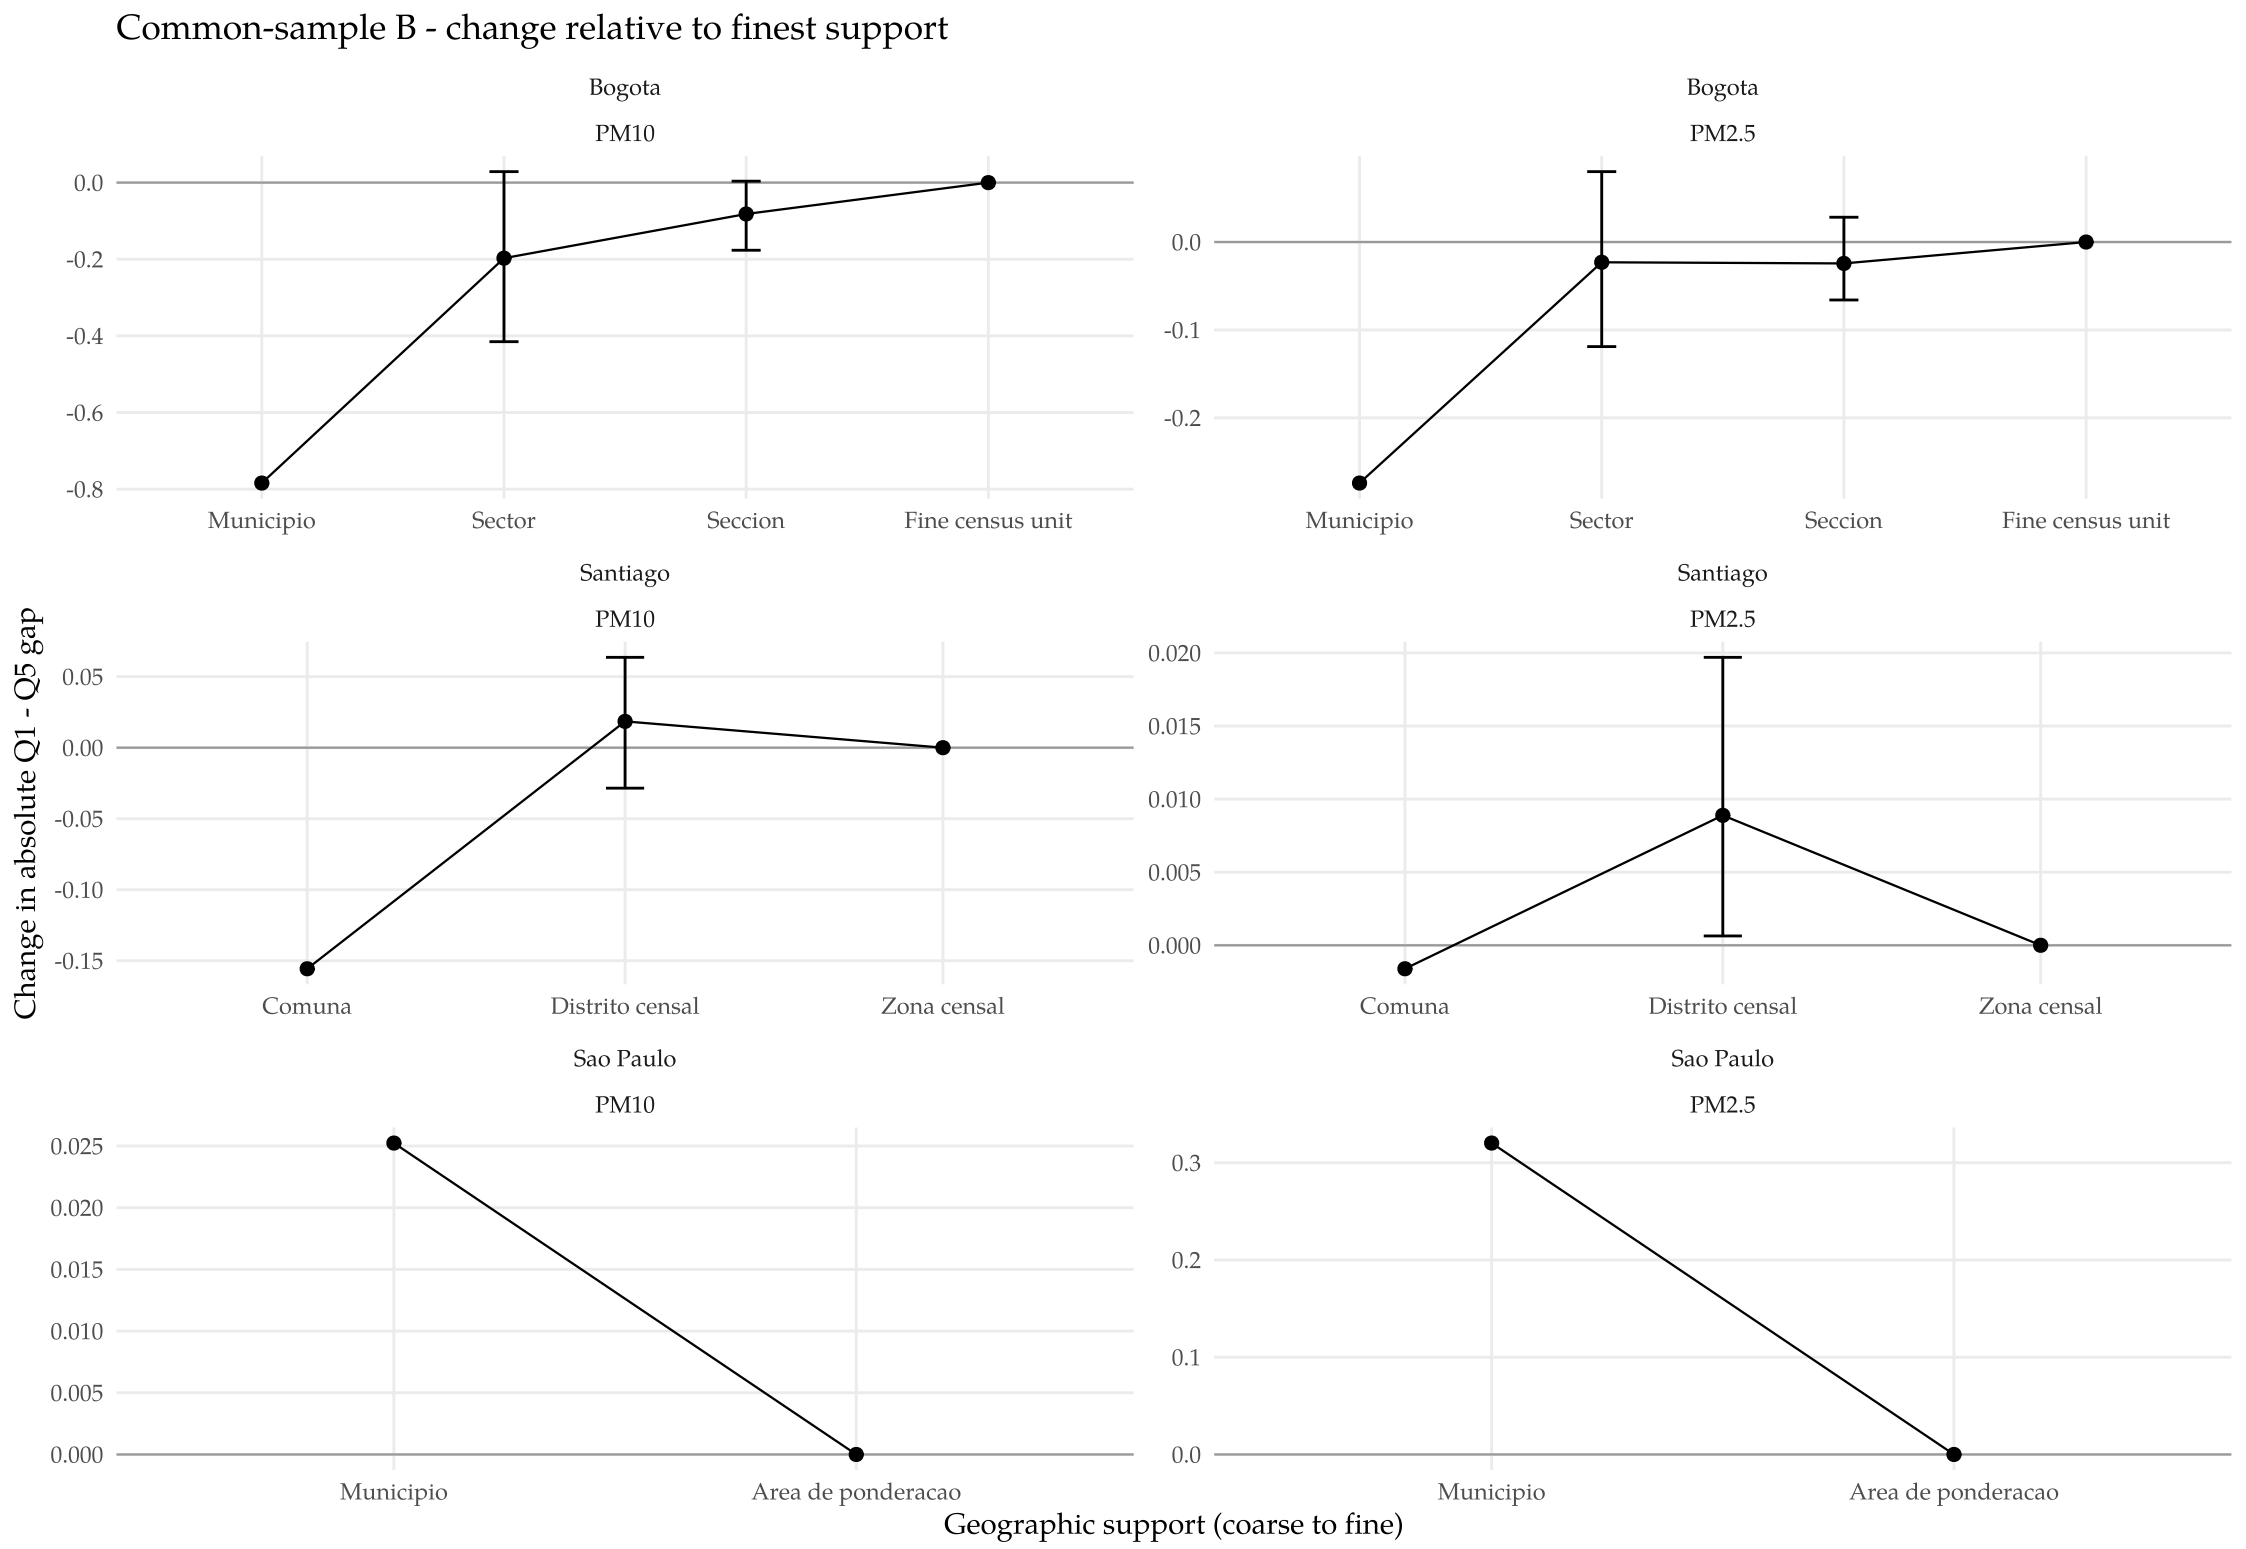

Native and common samples vary by level; P = education-reporting adults.
Common samples are pairwise intersections. Paired changes are shown separately.

Descriptive comparisons.

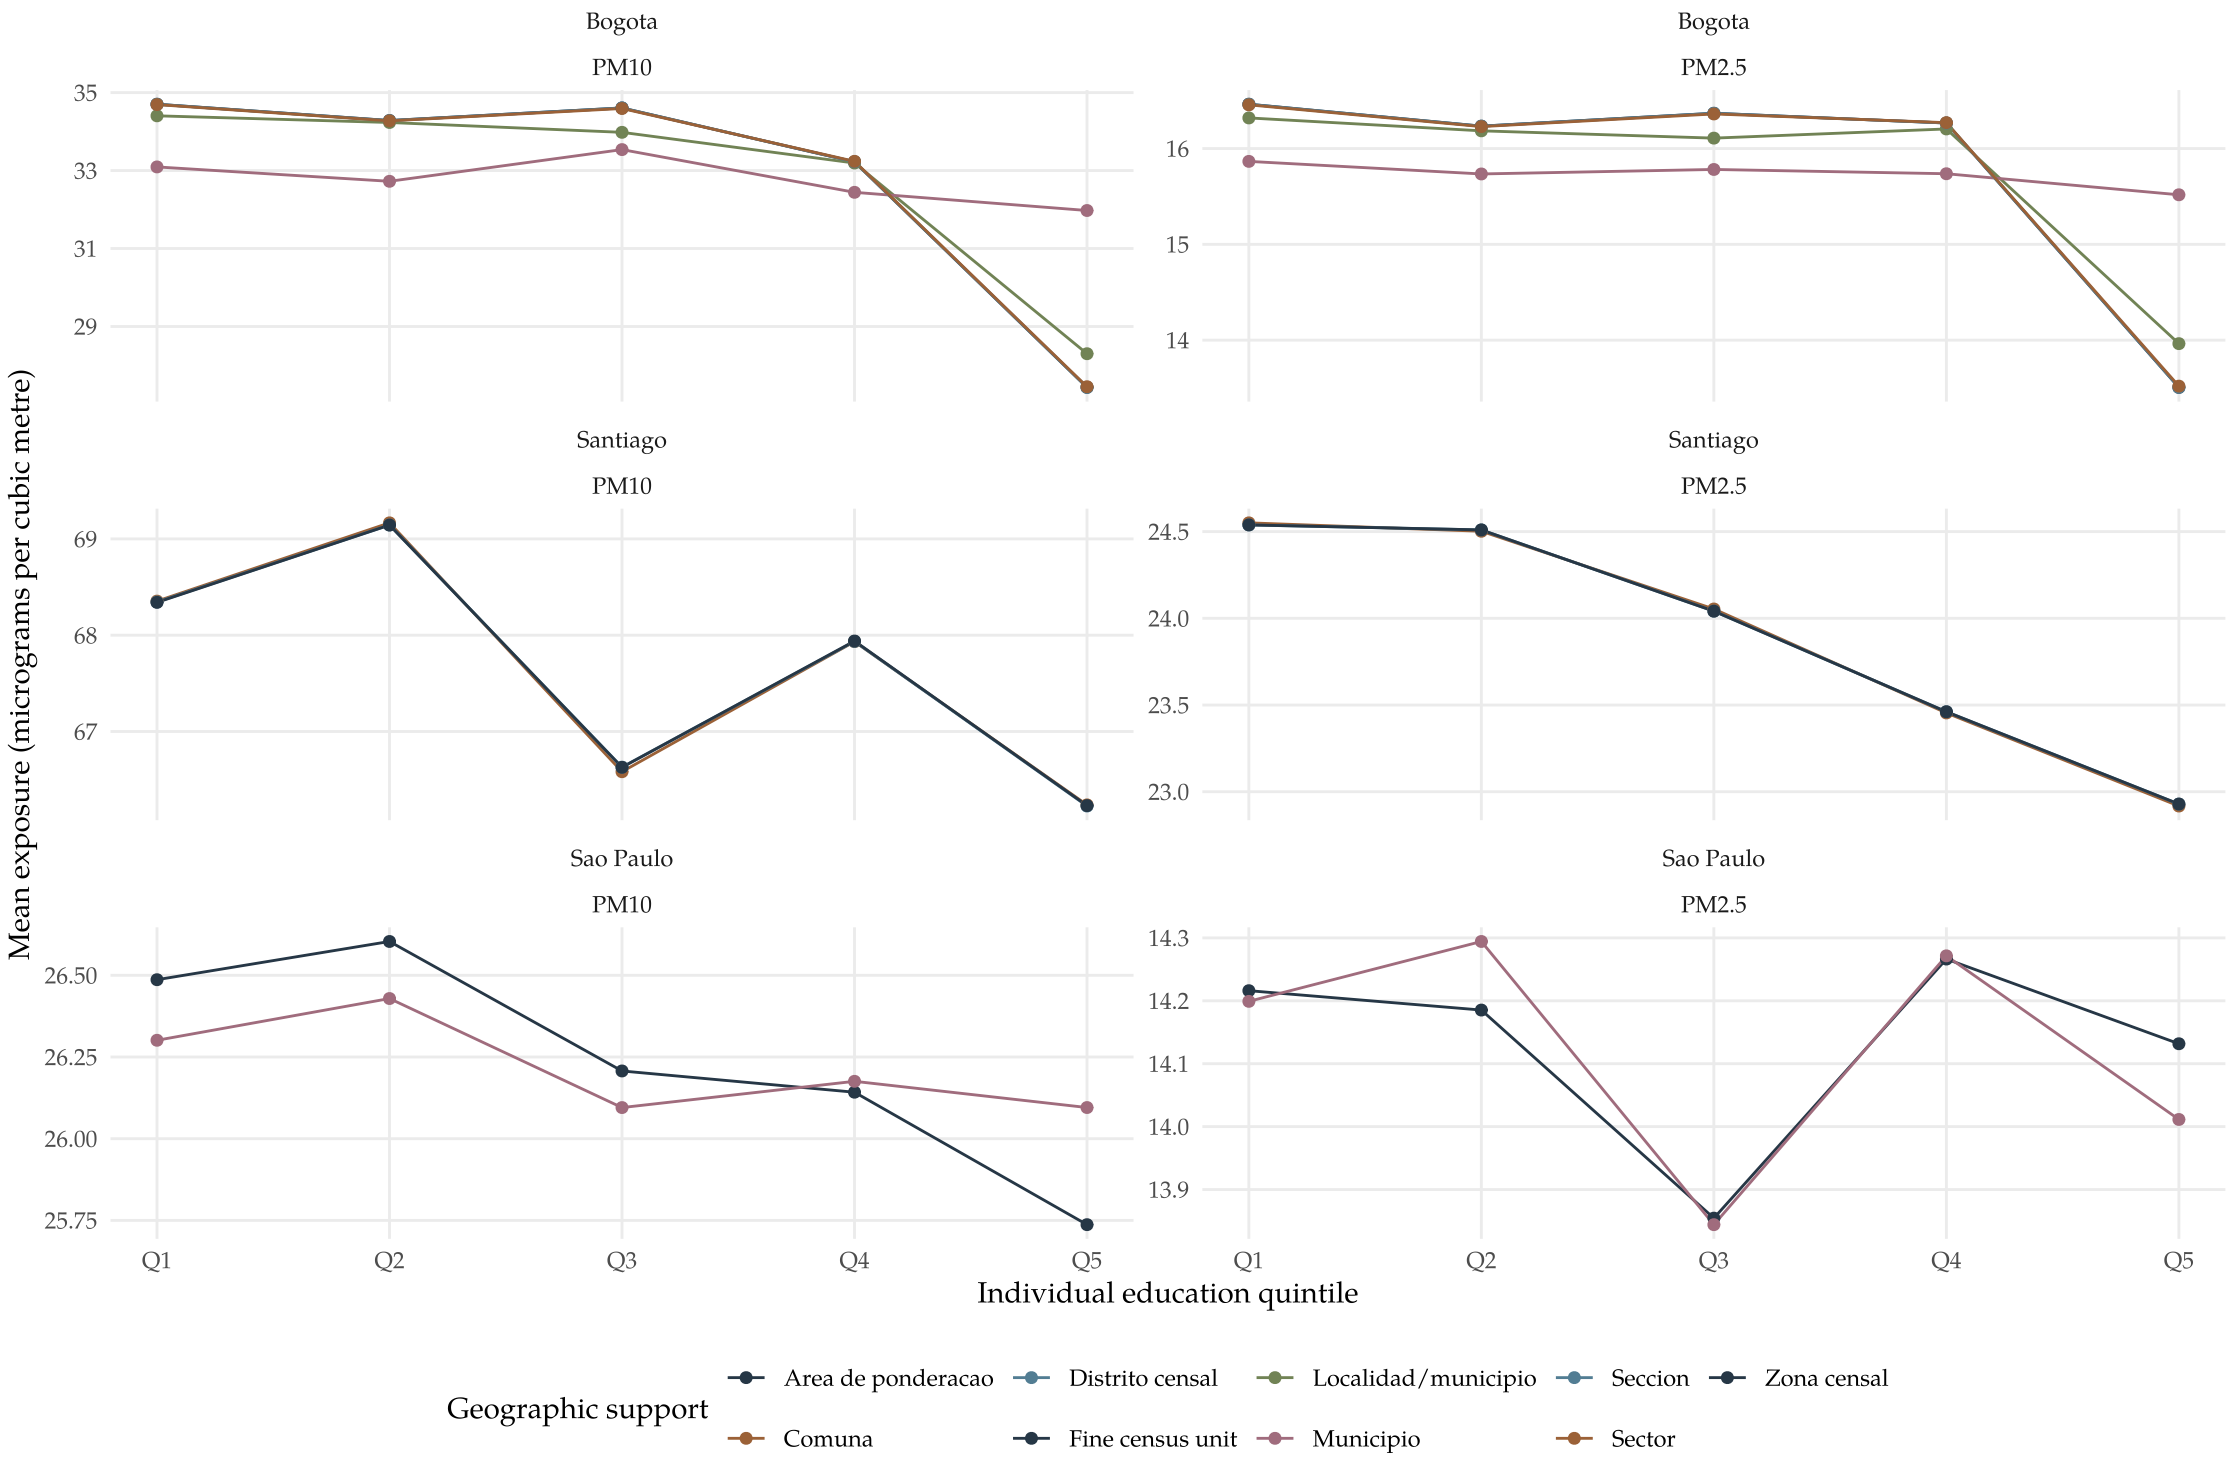

95% conditional geographic-cluster bootstrap intervals; 999 draws. Coarse comparisons are descriptive. B endpoints use the same pairwise population.

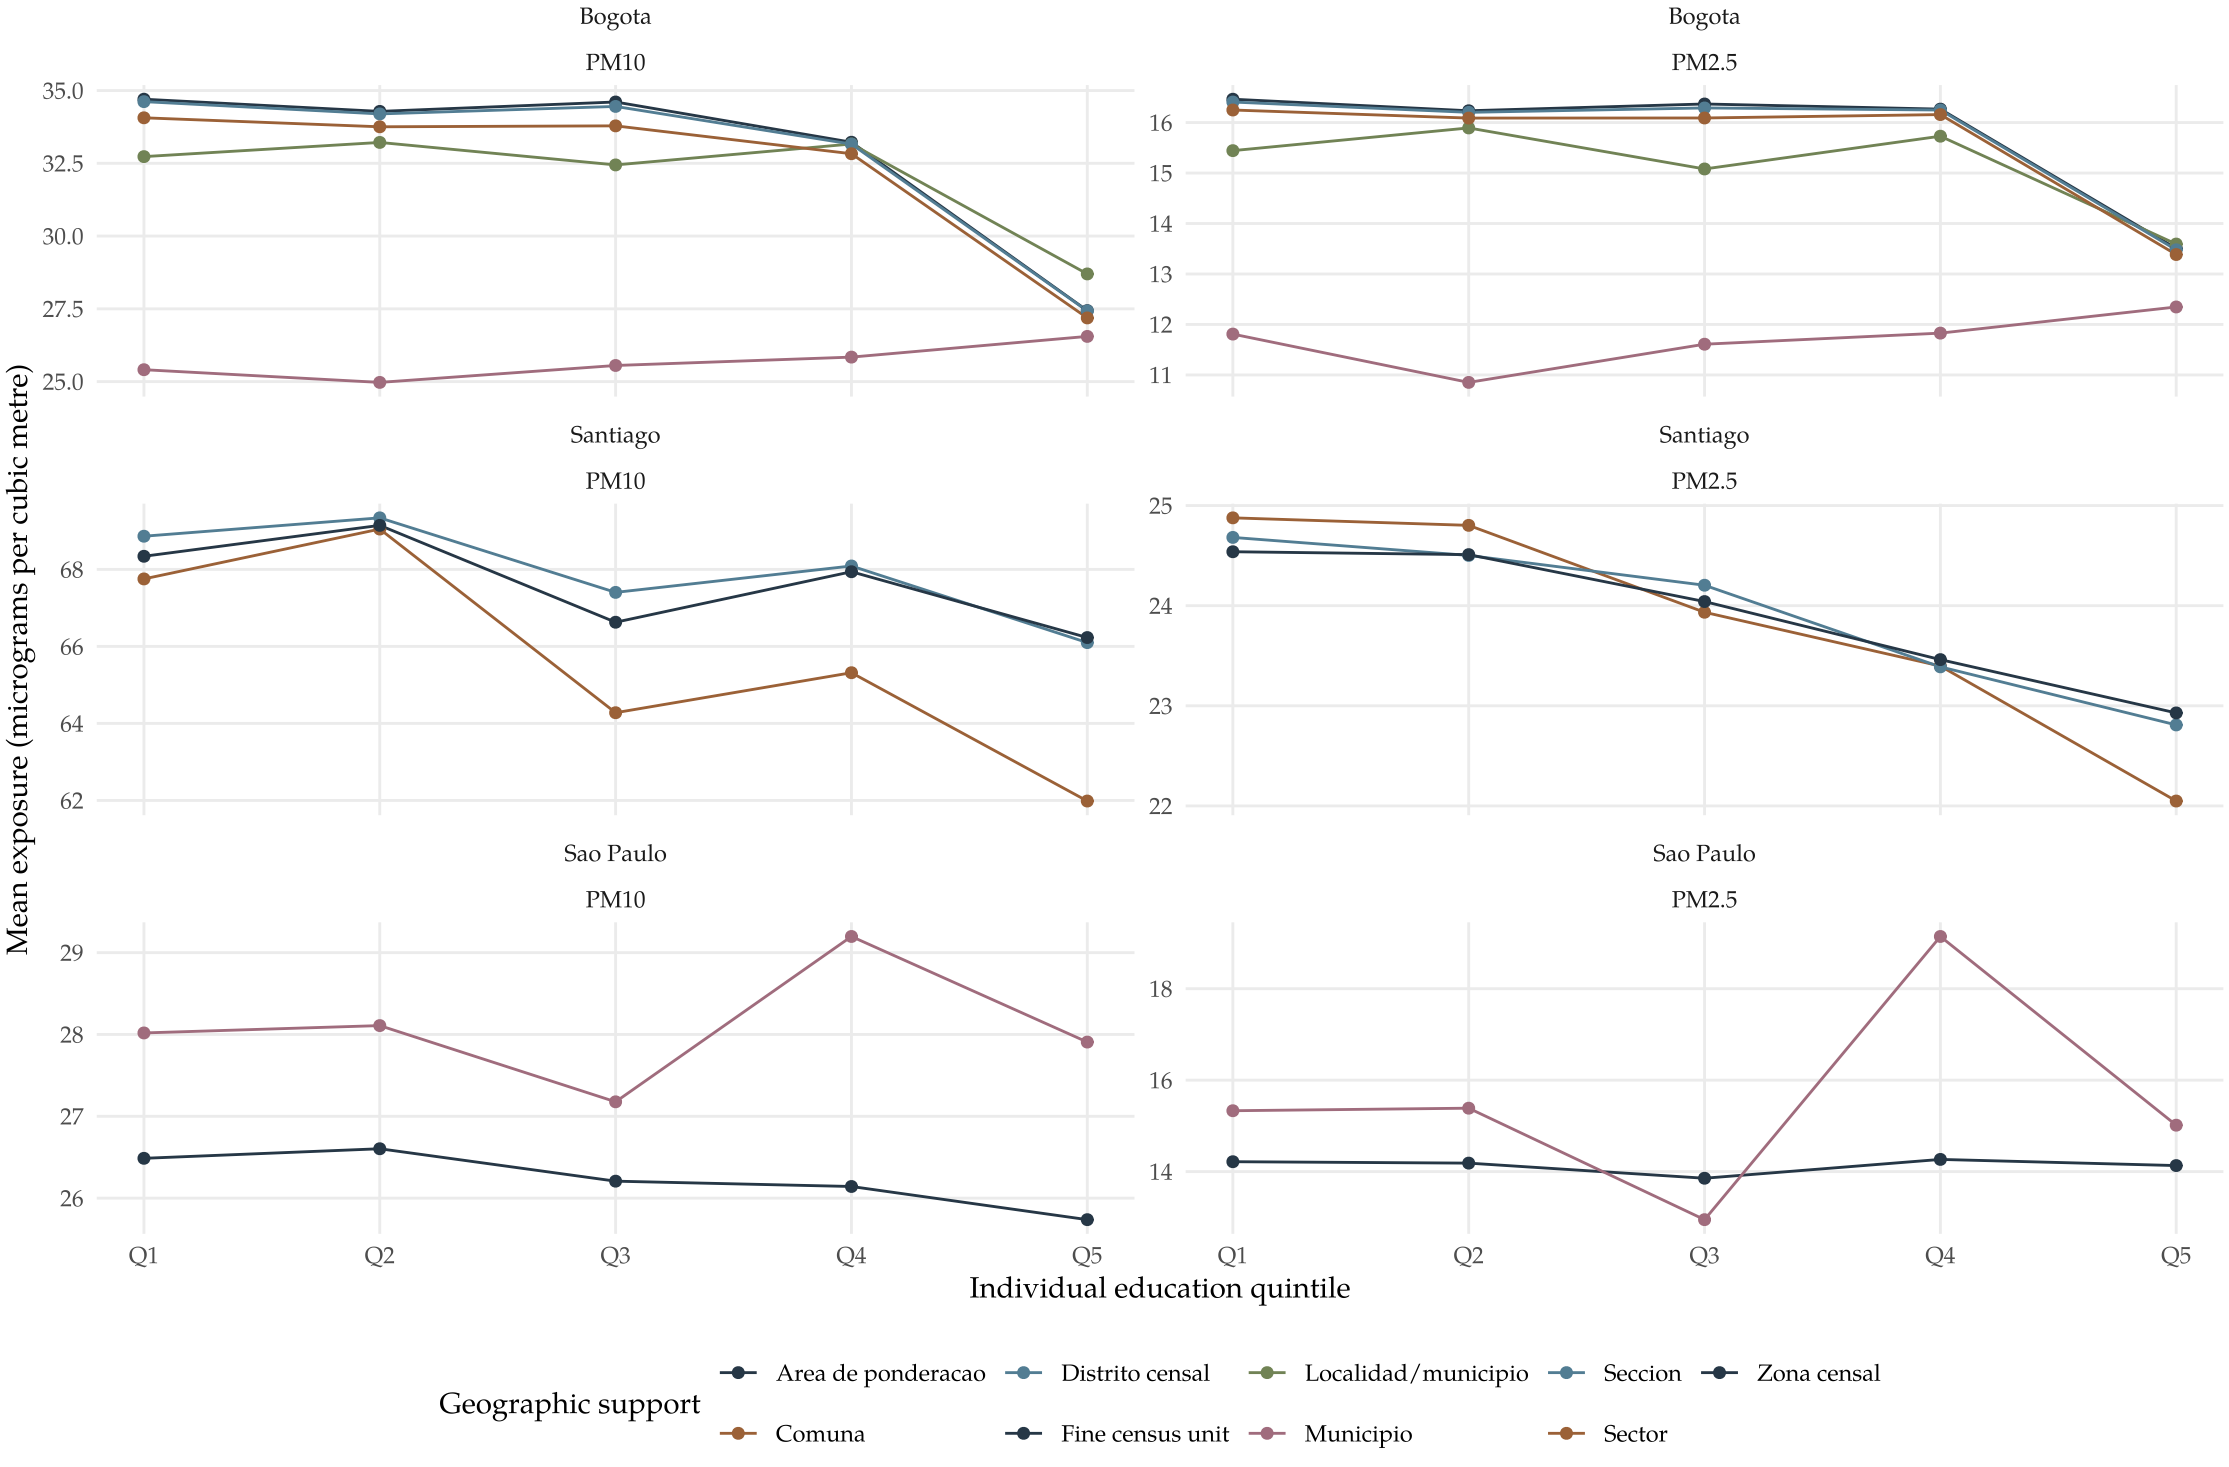

95% conditional geographic-cluster bootstrap intervals; 999 draws. Coarse comparisons are descriptive. B endpoints use the same pairwise population.

A - full education-group profiles

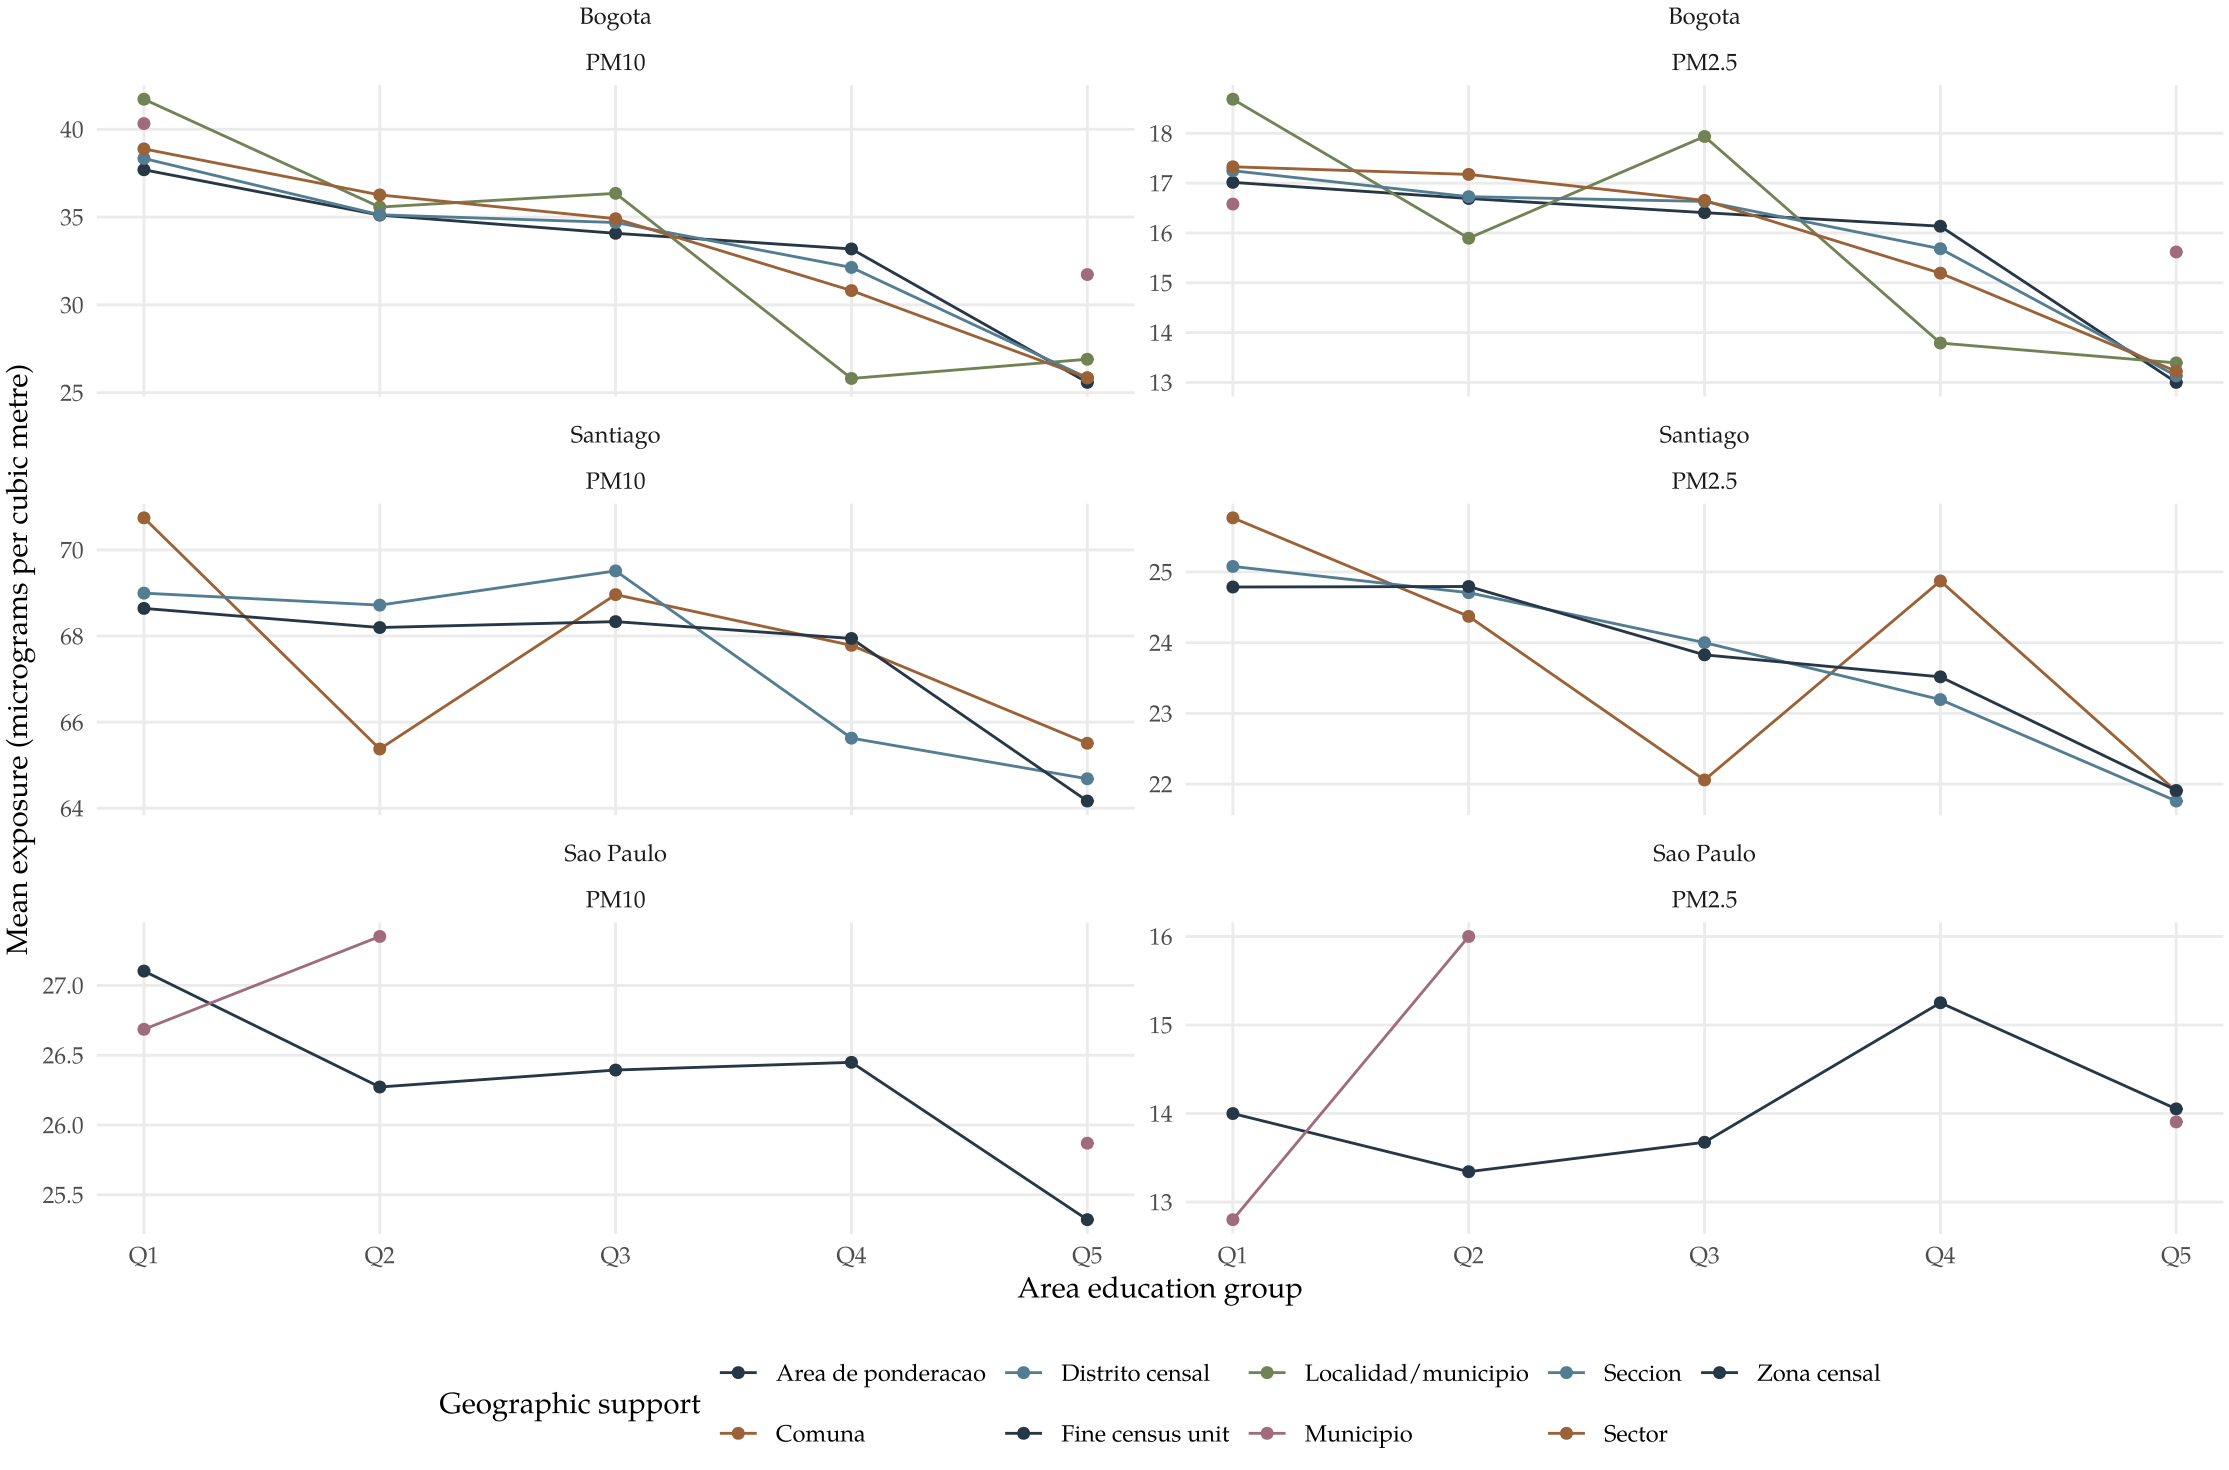

Group means use existing person weights; consult coverage tables for each population.

Native B - full education-group profiles

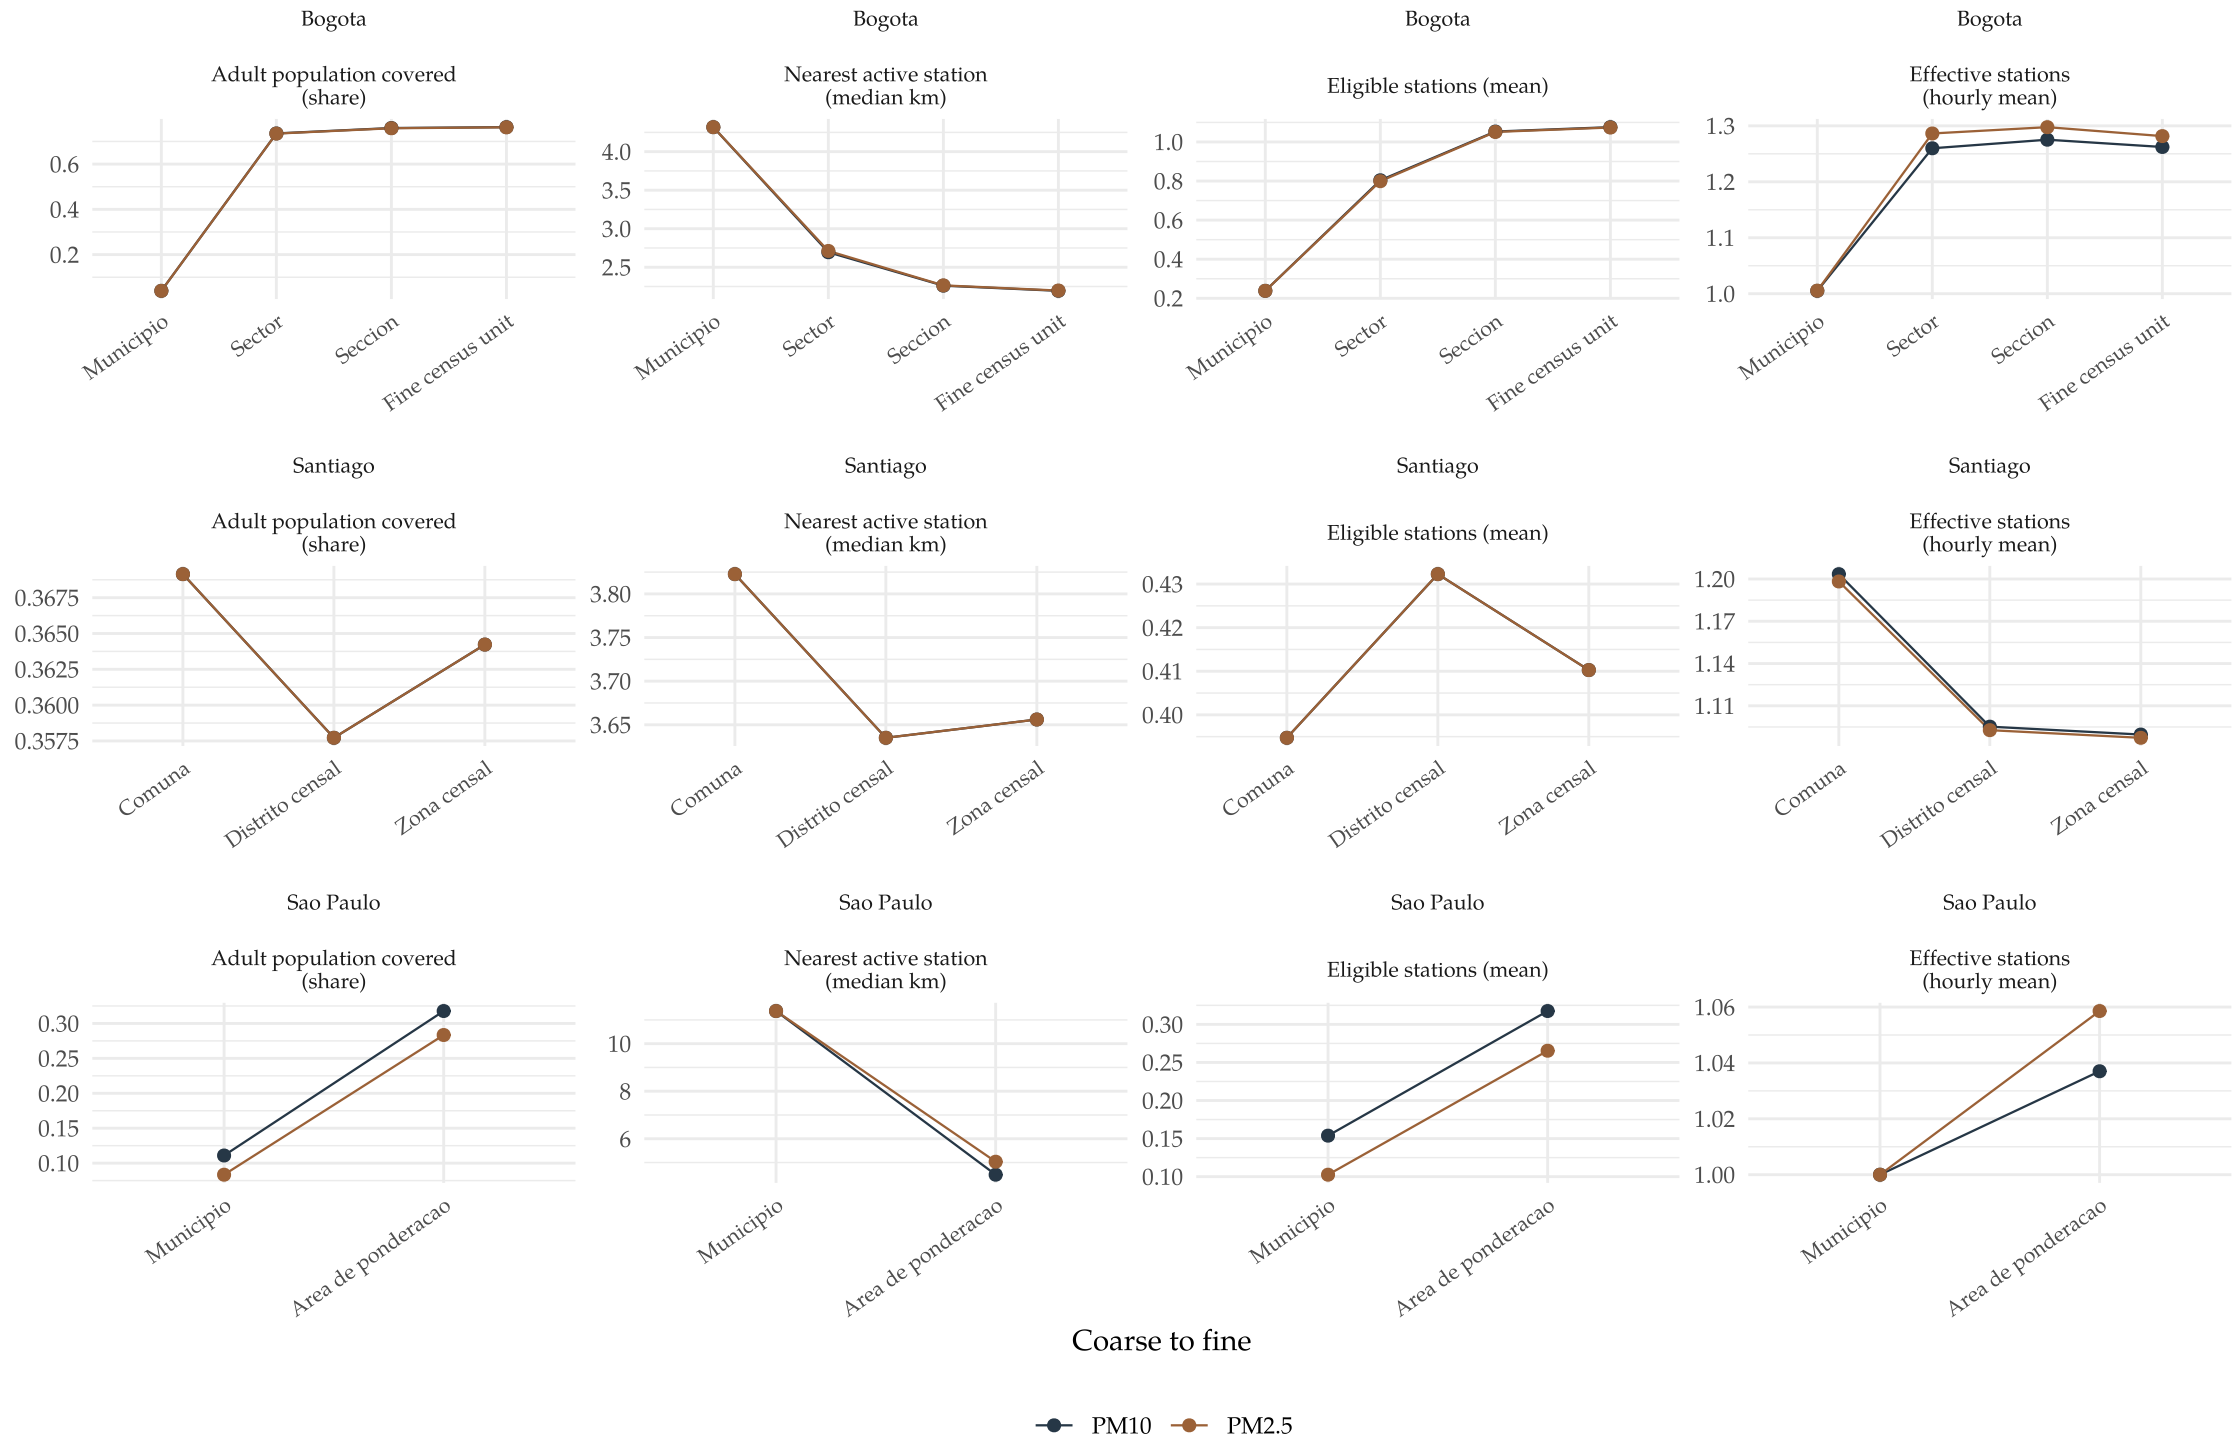

Group means use existing person weights; consult coverage tables for each population.

C - full education-group profiles

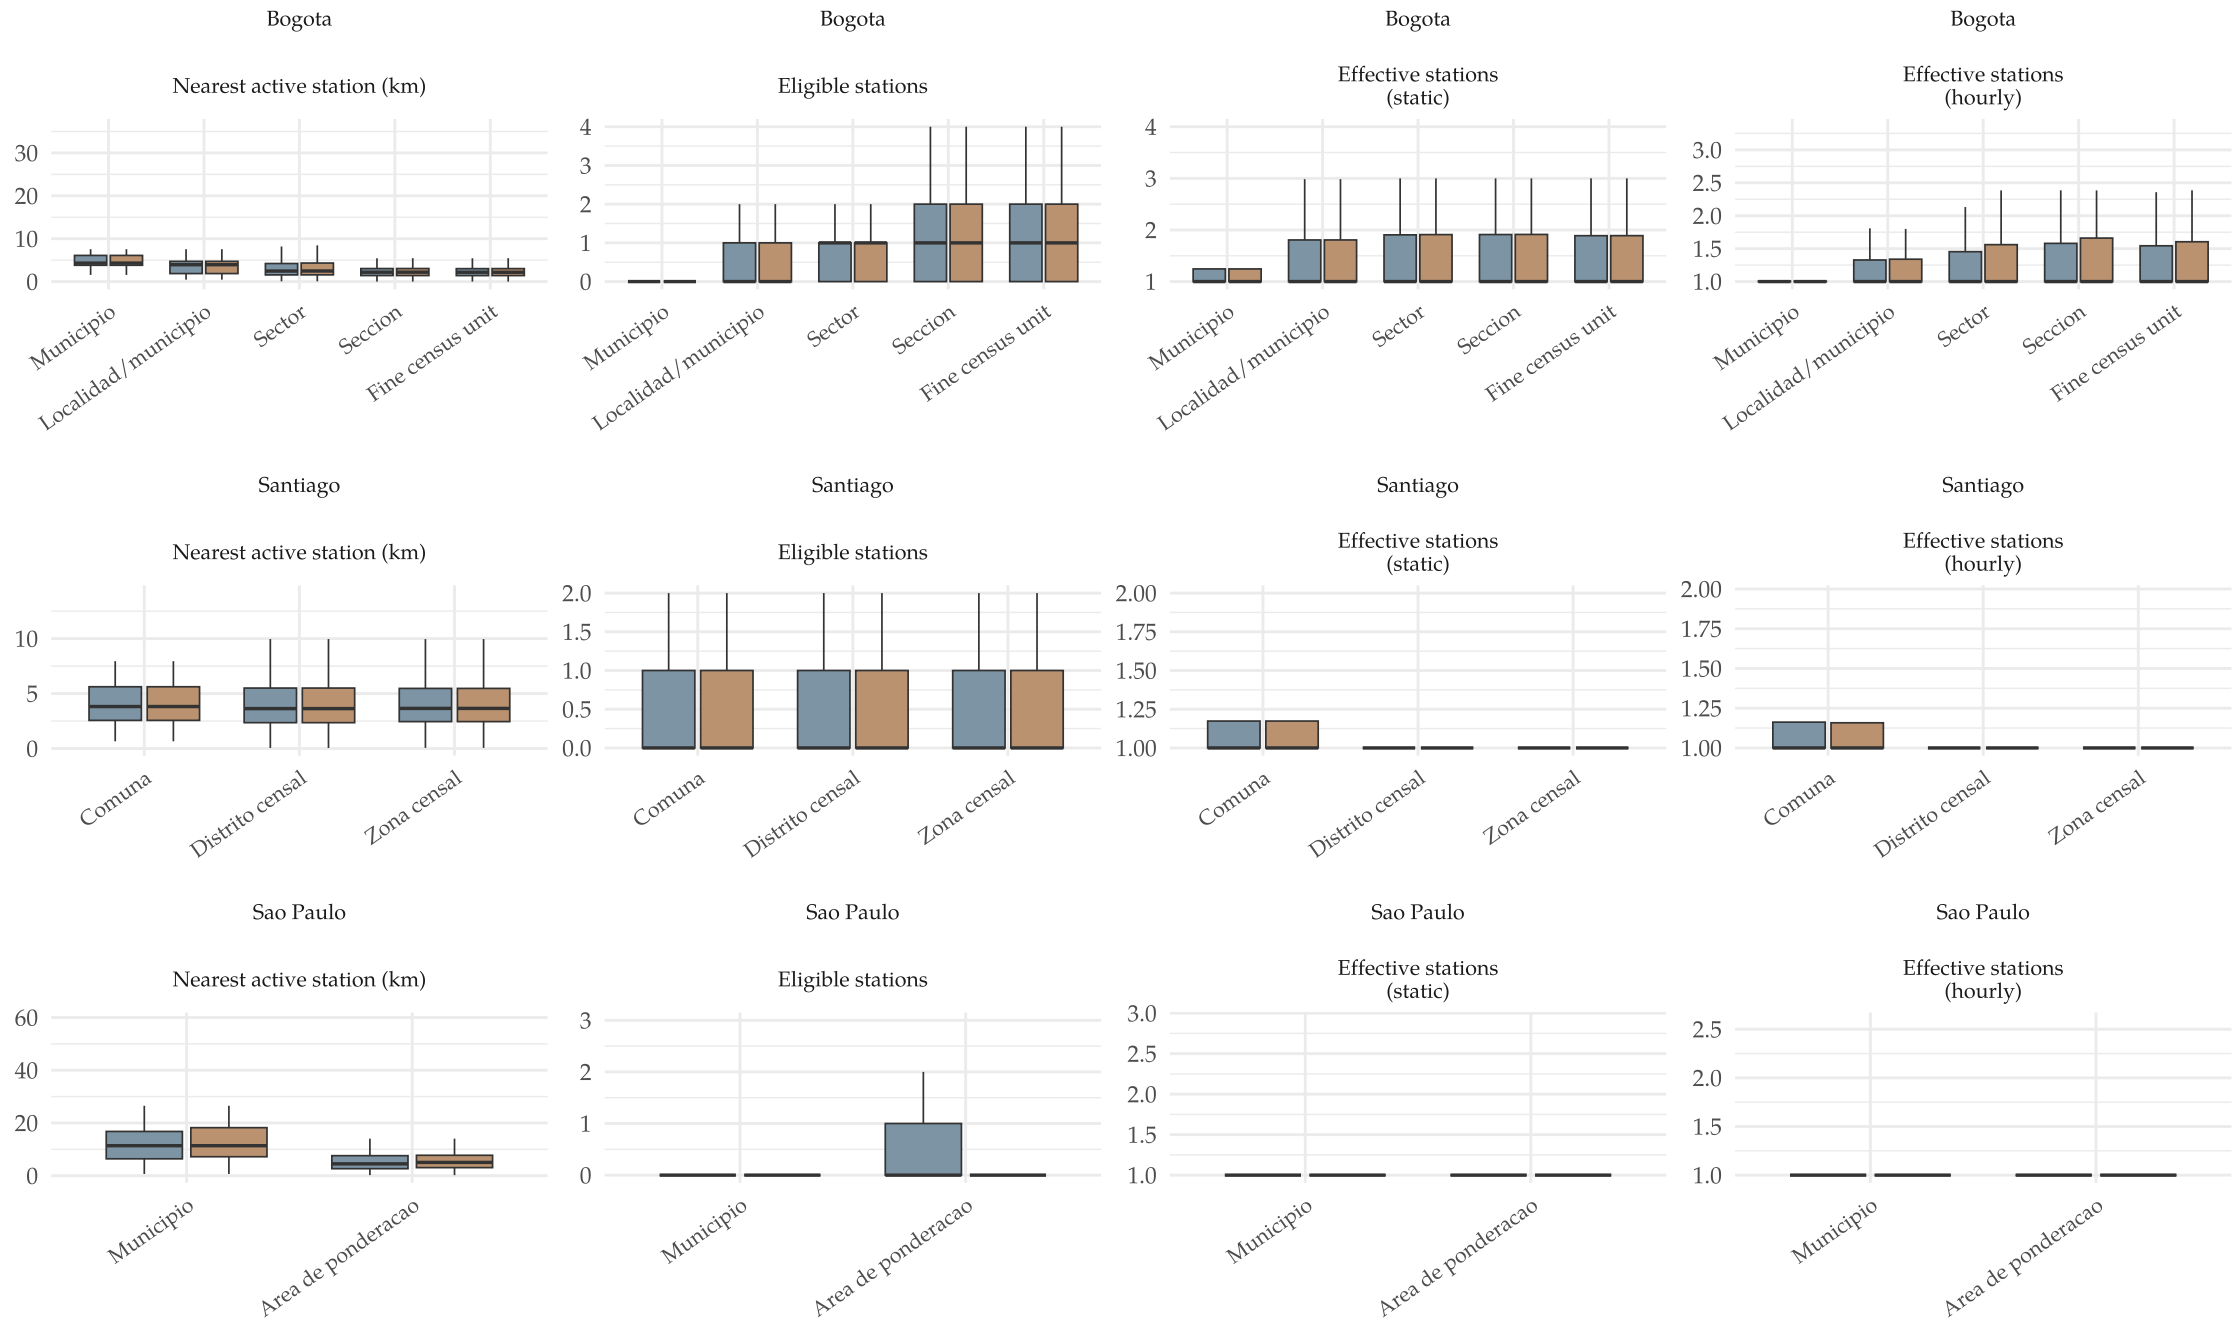

Classification only; finest exposure fixed. Empty area groups remain unavailable. These groups differ from A/B quintiles.

Monitoring-matrix sensitivity under Design B

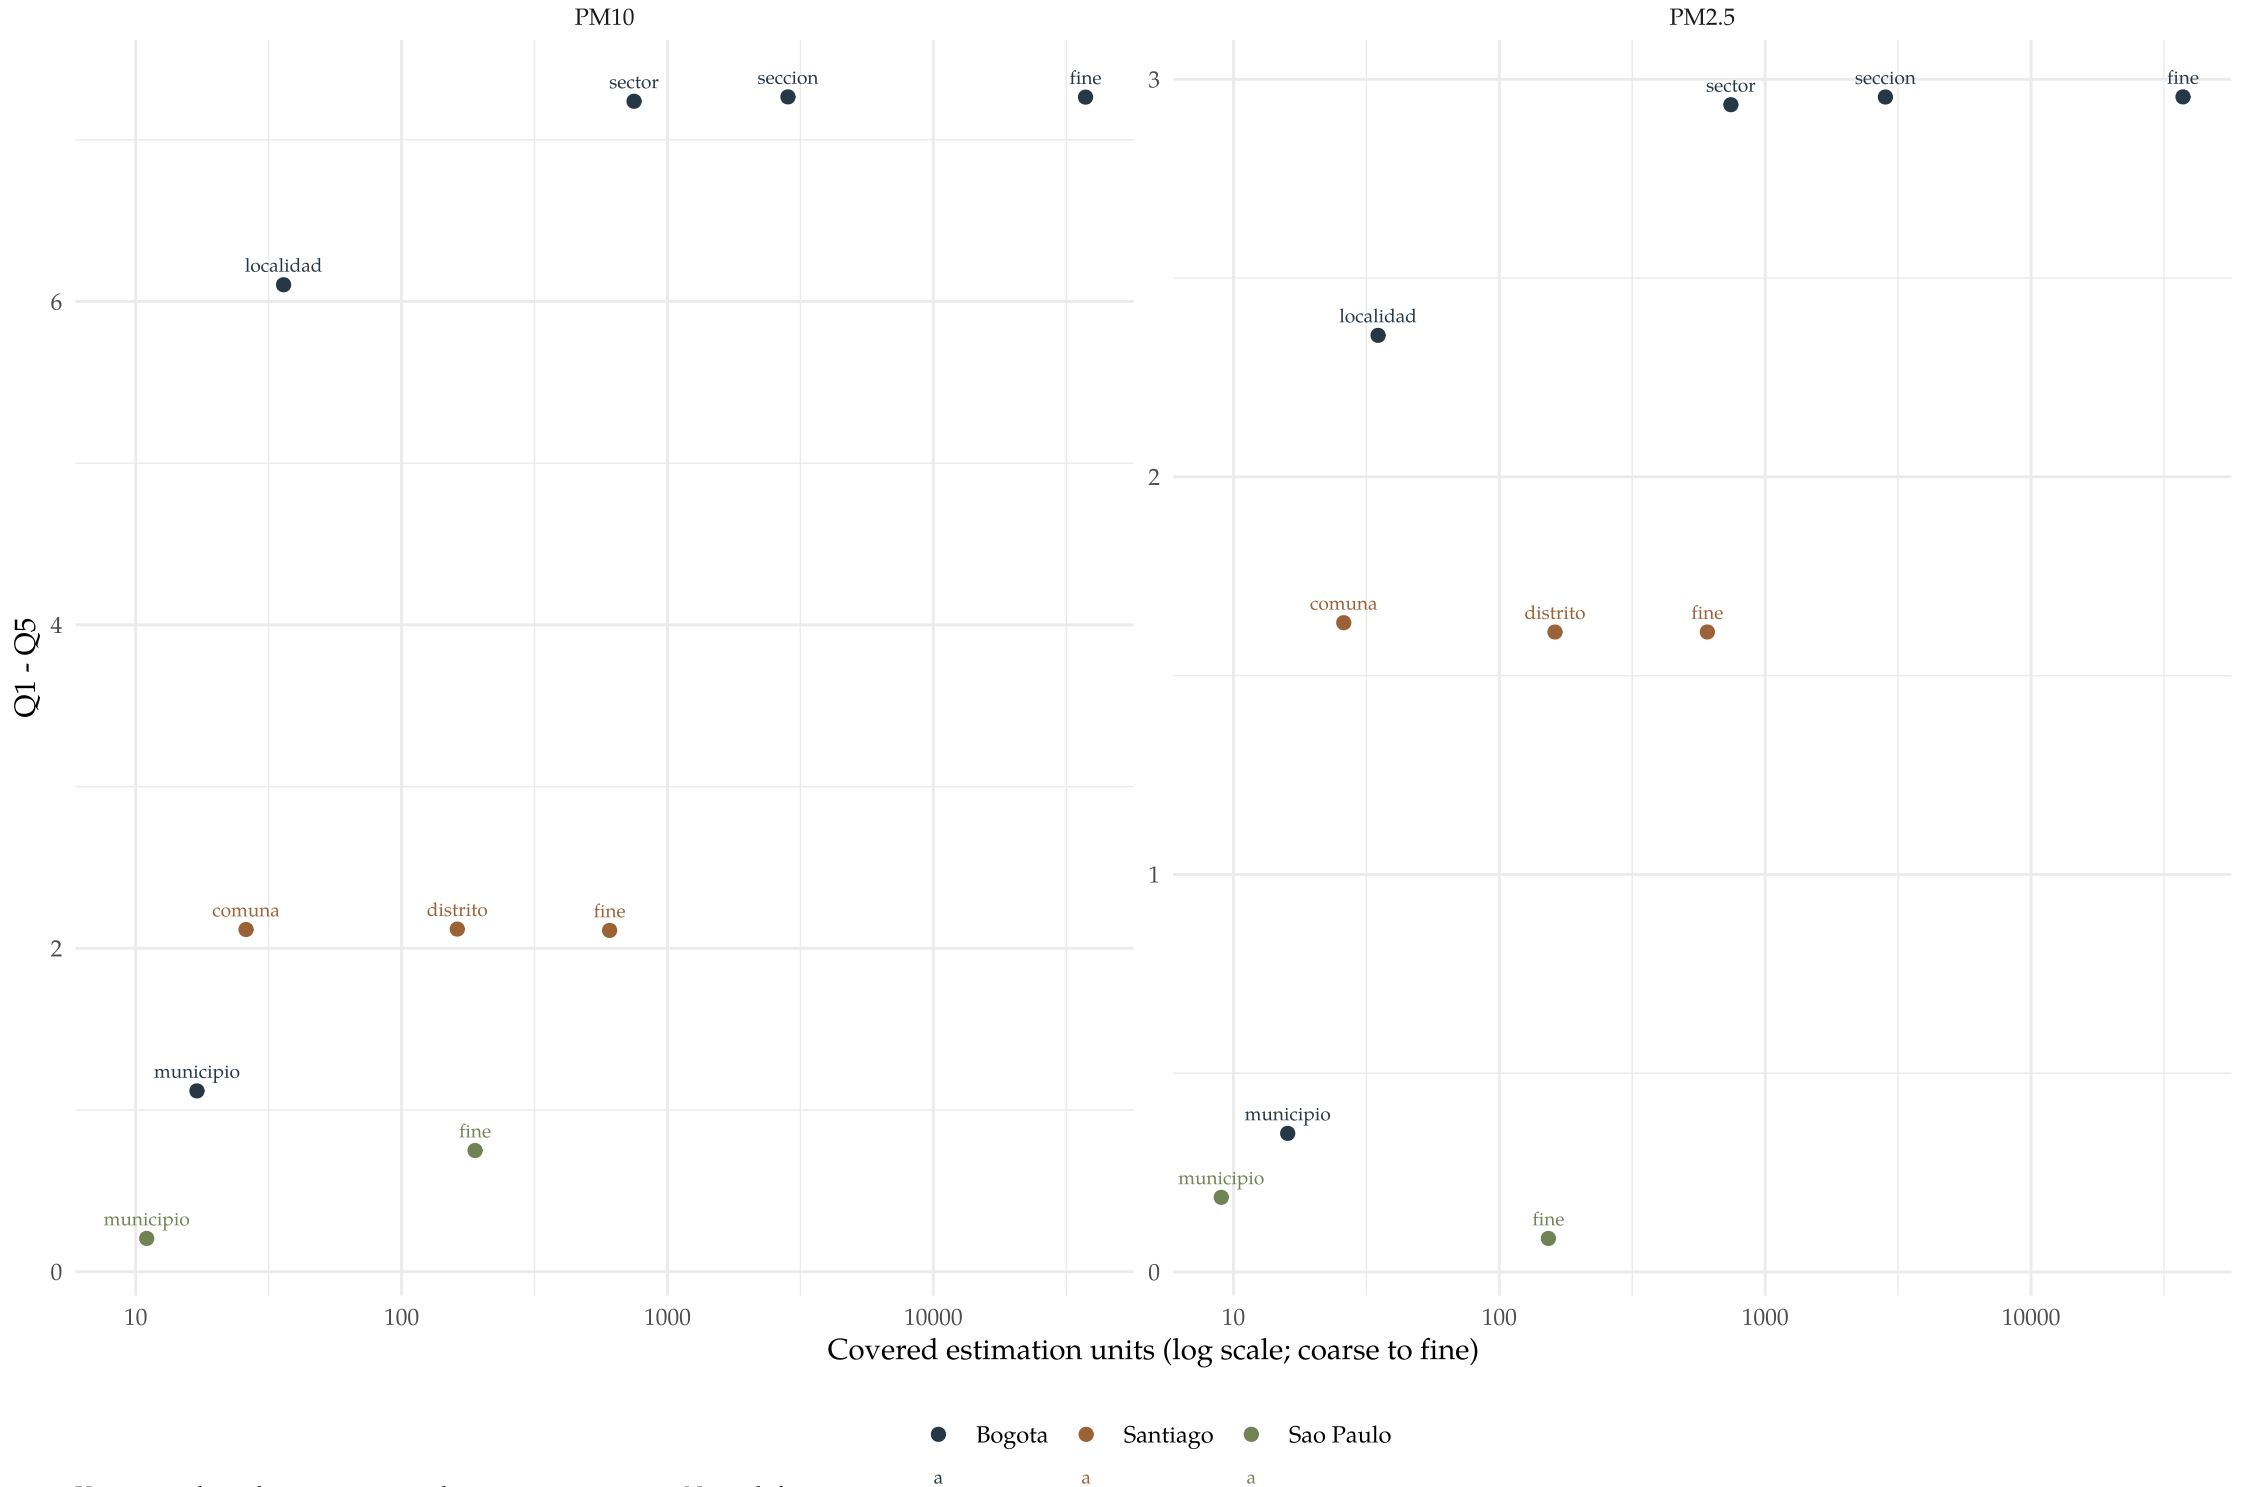

Catalog, active, eligible and contributing station counts are distinct in the tables.

Monitoring-matrix distributions across populated units

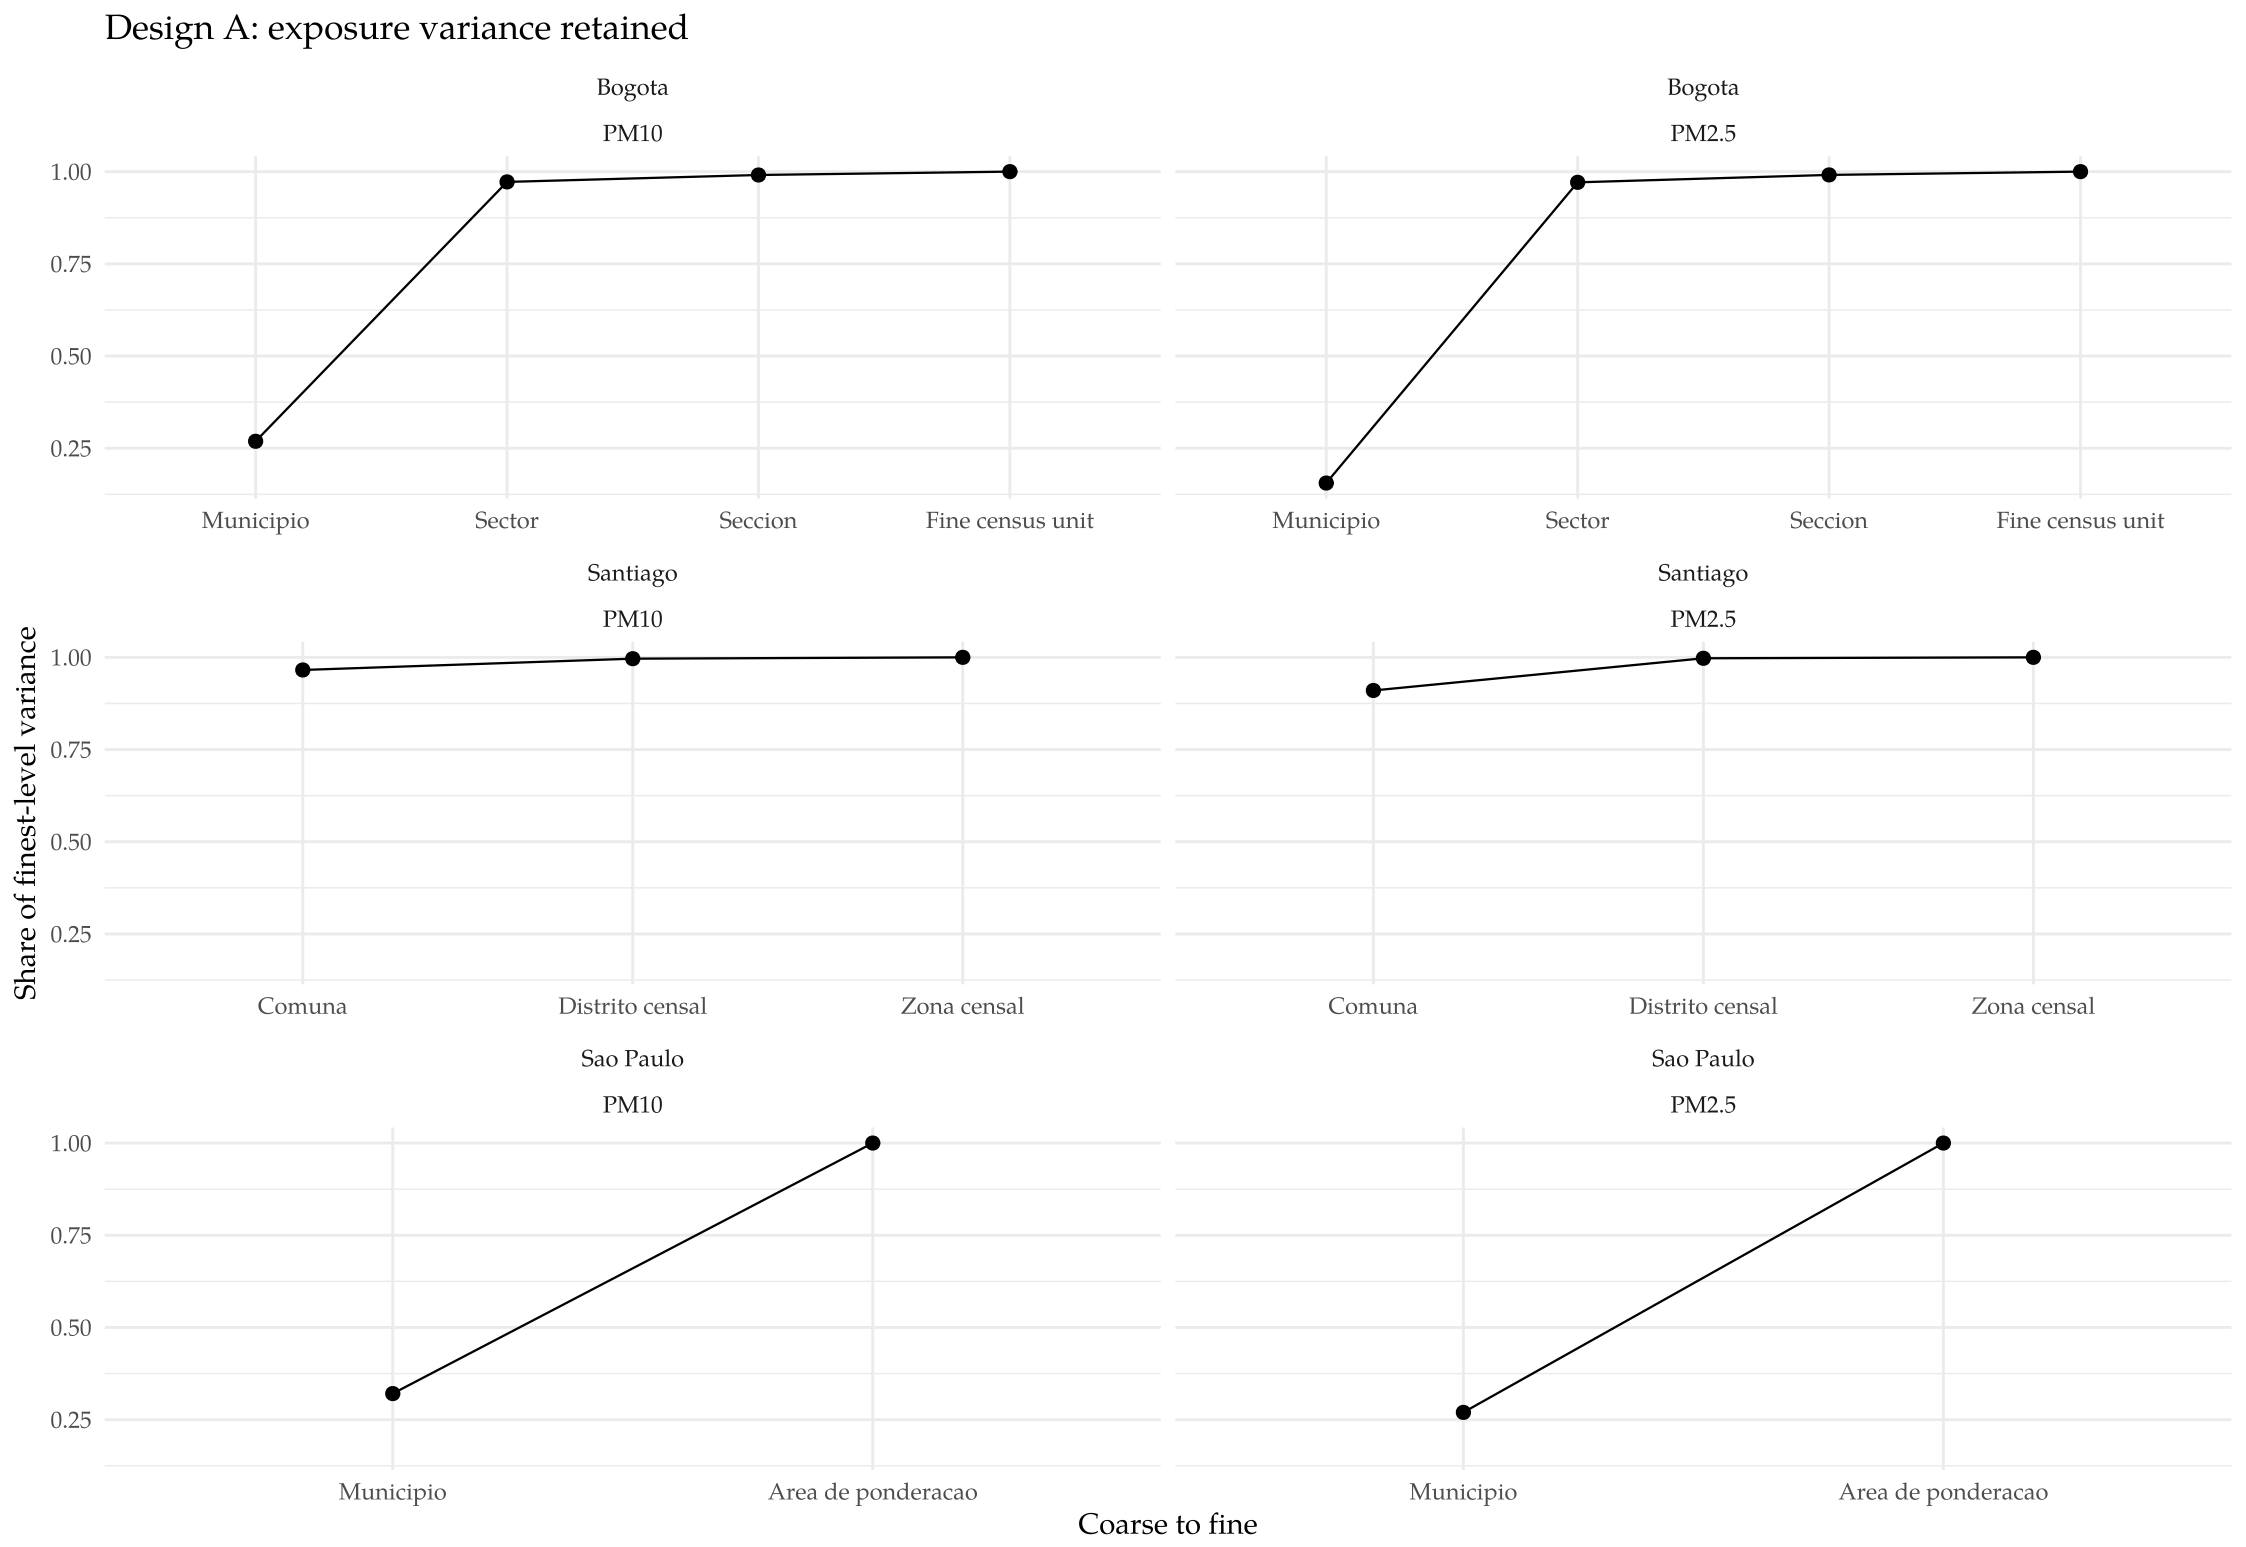

Boxes: unweighted unit quartiles; whiskers: 1.5 IQR. Outliers omitted from view only.

Design A: covered-unit counts as a supplementary resolution measure

Unit counts do not harmonize geographic concepts across cities. No pooled estimate.

All-adult aggregation weights and fixed covered support. Declining variance does not imply a monotone gap.
